

# Dash cam nut replacement

Broken plastic nut on windscreen suction cup

Written By: Javid Hussain

## Step 1 — windscreen suction cup, nut replacement

- 15mm compression nut from a water isolator valve, you can get these nuts from any plumbing or diy shop.
- Simply use the new metal nut, as you can see from the picture the plastic one cracked, I tried to tape it but that did not work. Metal one is much better, just make sure you dont over tighten and break the plastic threads.
- Final picture, all done and working properly.

To reassemble your device, follow these instructions in reverse order.
