

DeWalt DCS380 Blade Release lever Replacement

Replacing a broken blade release handle.

Written By: Jonathan Hicks

INTRODUCTION

This guide will show how to remove the blade release lever and replace it.

TOOLS:

- [T20 Torx Screwdriver](#) (1)

PARTS:

- [Blade release lever, part #N088811](#) (1)

Step 1 — Removing shoe and boot.

- ❗ Remove the battery before disassembly.
- Remove the shoe by pressing the yellow button on the left side of the hand grip.

Step 2

- Remove the two M8x18mm T20 bolts from the front plate.

Step 3

- Pull the front of the grip while holding the saw body in place.

Step 4 — Blade Release lever

- Fold the lever all the way back and push it out of the boot.

To reassemble your device, follow these instructions in reverse order.
