Step 1 — USB Motherboard

- Pop the front bezel off by inserting fingers underneath the left or right inside edge of screen.

⚠ Do not try to remove the bezel completely as there is a ribbon cable attached to the bottom for the buttons located in the bottom right hand corner.

- A lot of pressure is required to remove the bezel. Do not be afraid of asserting some force.
Step 2
- Turn the monitor over. Unscrew the four 4mm x 10mm screws on the back of the monitor and remove the plastic backing.
Step 3
- Unscrew the 3mm x 4mm screw that retains the side USB shield.

- Remove shield and set aside.

Step 4

- Remove the five 3mm x 2mm screws that retain the metal cover protecting the electronics.

- Remove the four 2.75mm x 6.75mm studs by the video imput ports.

- Slide the cover downwards to unlock and remove cover.

This document was generated on 2019-11-05 09:55:01 PM (MST).

Step 5

- Unplug board connections.

- Uncsrew the four 3mm x 5.5mm screws that hold the USB motherboard down.

- Get new board ready to install.

You now know how to replace the USB motherboard on a Dell 1908FPc monitor.
