INTRODUCTION

In this guide, we will show you how to remove and replace the Memory Modules.

Step 1 — Popping up the Memory Module

⚠ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in [Before Working Inside Your Computer](). After working inside your computer, follow the instructions in [After Working Inside Your Computer]().
● Using your fingertips, carefully spread apart the securing clips on each end of the memory-module slot until the memory module pops up.
Step 2 — Slide and Remove the Memory Module

● Slide and remove the memory module from the memory-module slot.

Step 3 — Align the Notch

- Align the notch on the **NEW** memory module with the tab on the memory-module slot and slide the memory module firmly into the slot at an angle.

Step 4 — Press the Memory Module Down

- Press the memory module down until it clicks into place.

- ⓘ NOTE: If you do not hear the click, remove the memory module and reinstall it.

To reassemble your device, follow these instructions in reverse order.
