INTRODUCTION

Use this guide to replace the RAM in your Dell Dimension 4600.

⚙ PARTS:

- PC3200 1 GB RAM Chip (Desktop) (1)

Step 1 — Side Panel

- Locate the case cover latch on the back of the computer.

Step 2

- Using your index finger, slide and hold the cover latch down.

- While holding the latch down, place your other hand flat on the side of the case and firmly shift the side panel to the left until it disengages.

Step 3

- Grab the edge of the panel and slide it away from the case until it is removed.
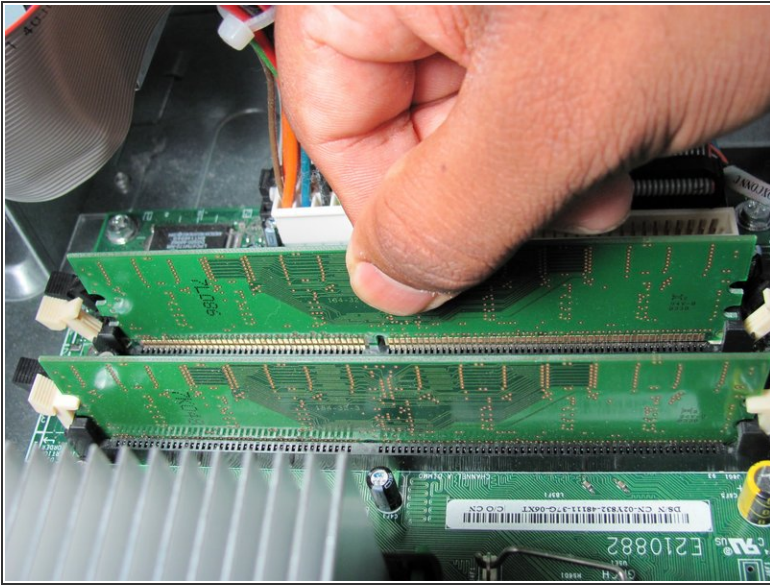

Step 4 — RAM

- (i) Lay the computer flat on its side so that you are looking down on all of the components.

- Locate the RAM modules on the motherboard.

Step 5

- Locate the white or black tabs holding the RAM module in place.

- Place your index finger on the tab and firmly press down. The tab should release and the RAM module should be slightly raised.

- Repeat this for the tab on the other side of the RAM module.

- Repeat this step for each RAM module.

Step 6

- Grasp the RAM module and firmly pull upwards until it is released from its slot.

- Repeat this step for each RAM module.

To reassemble your device, follow these instructions in reverse order.
