

Dell Inspiron 15z-5523 Fan Replacement

We will remove the old Fan and replace it with a new working Fan.

Written By: Christian Chavez

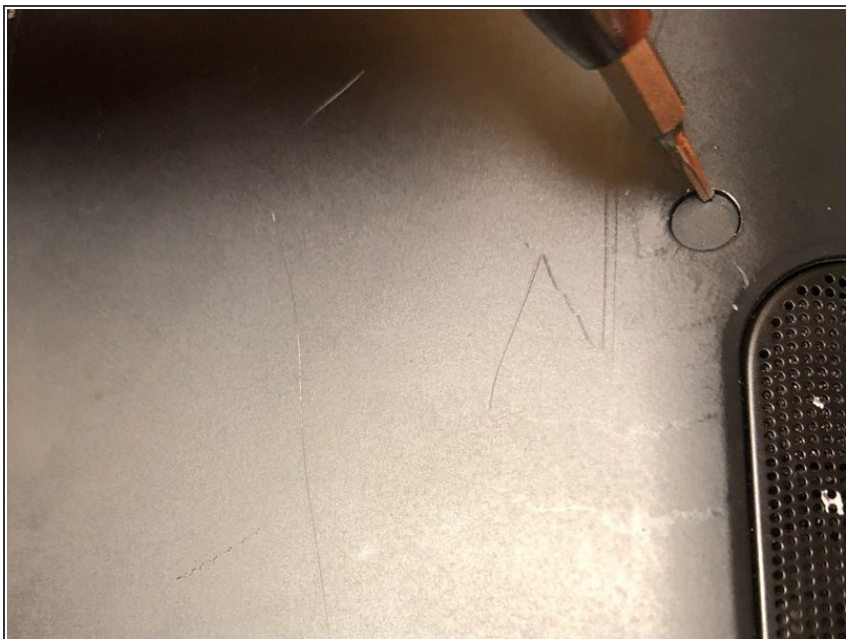

TOOLS:

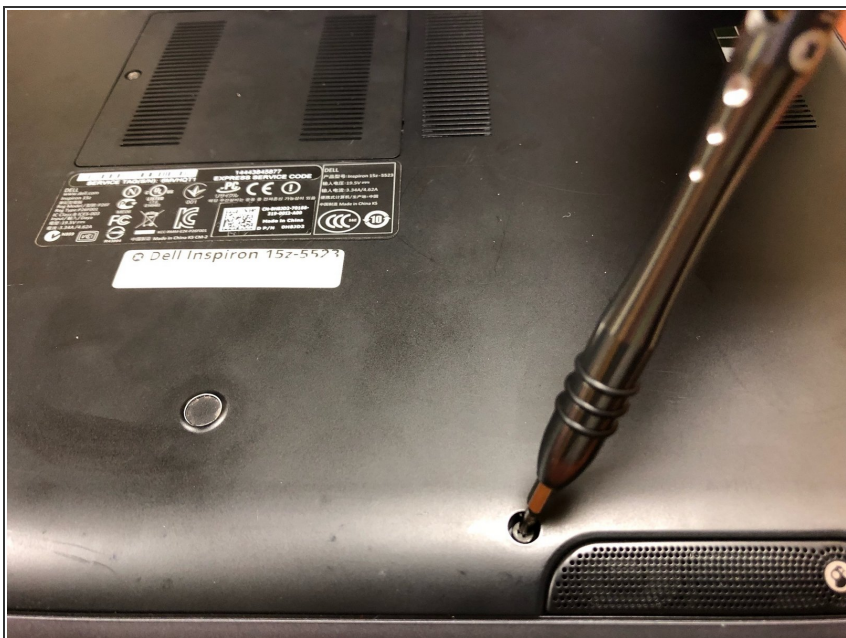

- [Pro Tech Toolkit](#) (1)
-

Step 1 — Fan

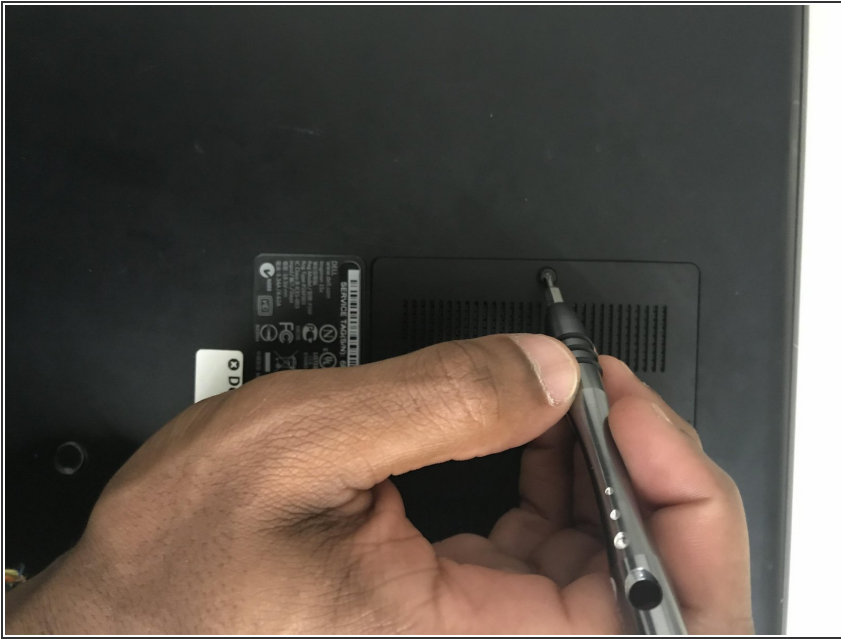

- First turn over your computer and remove all of the rubber stoppers on the back.

Step 2

- Then remove all the screws that were under the rubber stoppers.

Step 3

- Take the screw out of the back plate.

Step 4

- Remove back plate by grabbing and lifting up.

Step 5

- Remove CD port by pulling it straight out.

Step 6

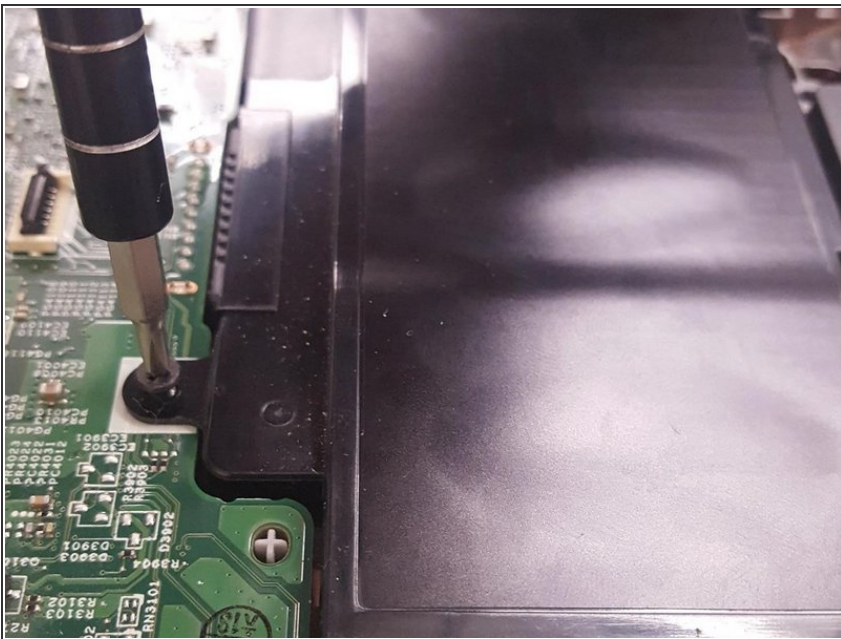

- Remove the keyboard.

Step 7

- Take screw out of the surface below the keyboard and remove the top layer of the computer off of the base.

Step 8

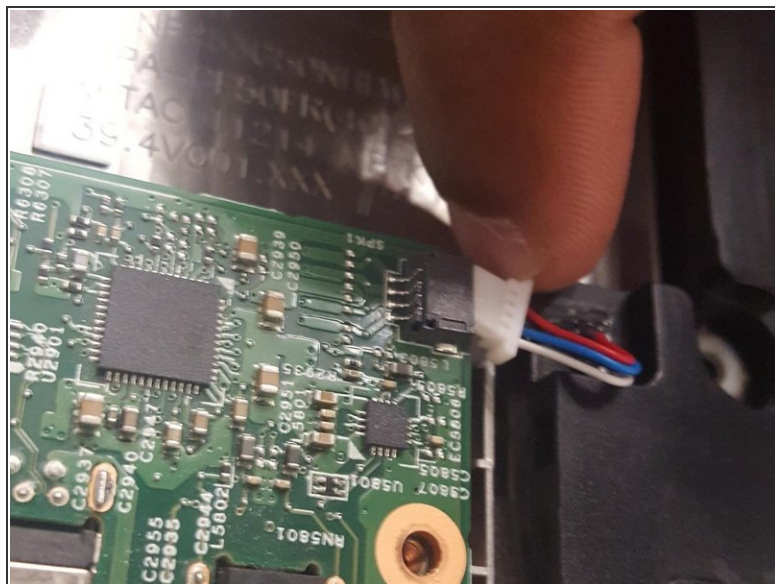

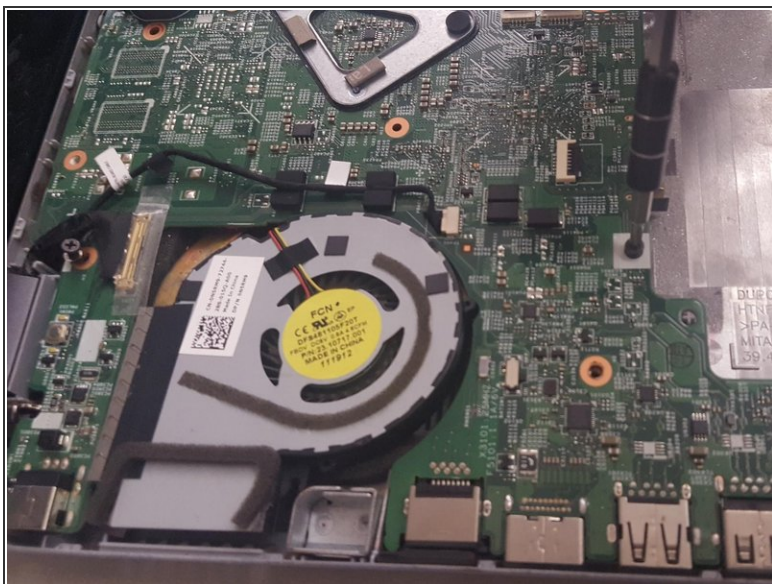

- Remove the battery by unscrewing the 5 screws and pull straight out.

Step 9

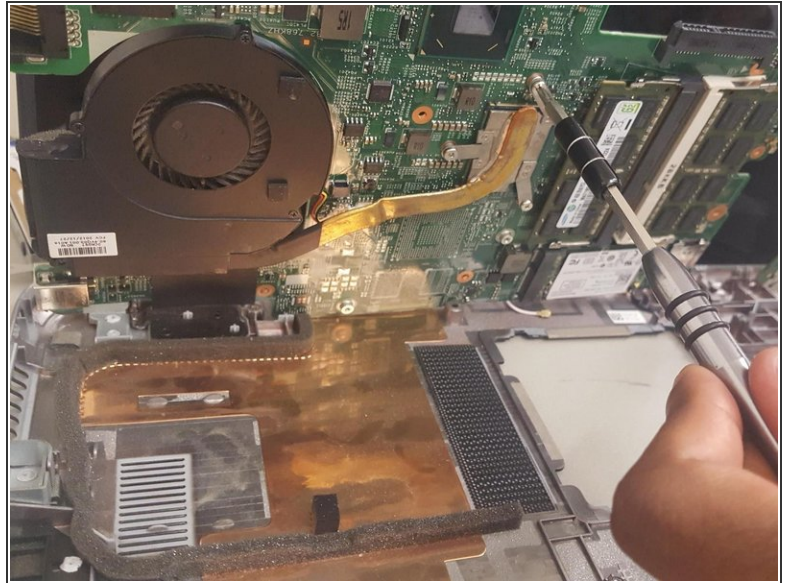

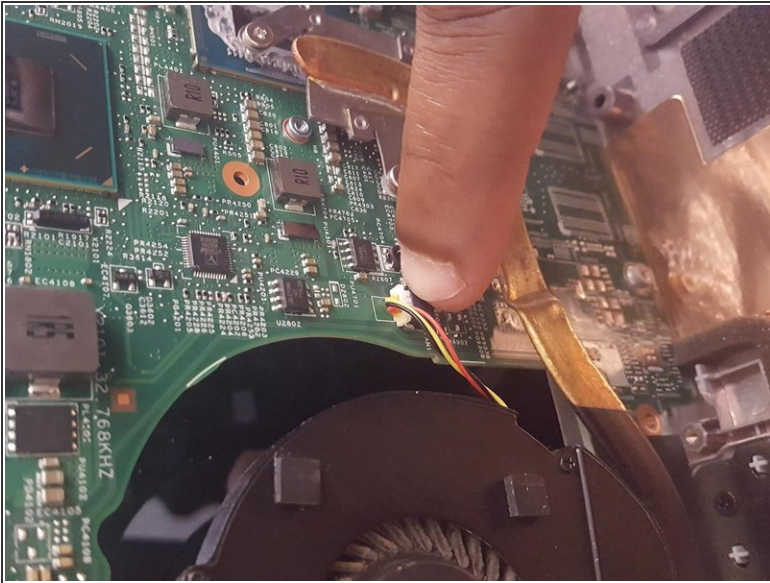

- Remove the three screws from the hard drive and remove by pulling straight out.

Step 10

- Unscrew motherboard and remove the two clips.

Step 11

- Flip motherboard up, unscrew the three screws, and unclip the fan.

To reassemble your device, follow these instructions in reverse order.
