Written By: oldturkey03

## INTRODUCTION

The is laptop received a new hard drive and a memory module exchange. Straight forward replacement with no surprises.

### TOOLS:

- [Phillips #1 Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
-

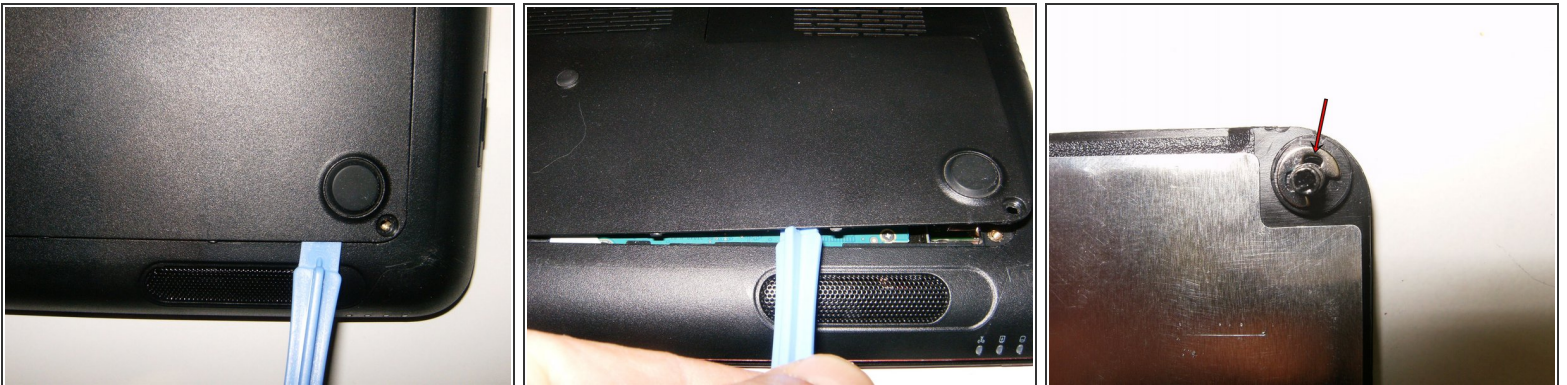

## Step 1 — Memory module

- Here is a Dell Inspiron 14z N411z that is going to get a new memory module.
- On the back side is only one cover for the hard drive as well as the memory module.
- Remove the Phillips screw on the bottom right corner of the cover.

## Step 2

- Use a plastic opening tool to unsnap the cover from the back case.
- Move the tool gently along the corner of the cover.
- The screw that holds the cover on, has a spring clip that keeps the screw attached to the cover. during removal of the screw, this clip might come of.

## Step 3

- Use your fingertips to carefully spread apart the securing clips on each end of the memory-module connector until the memory module pops up.
- With the securing clips spread, the memory module will pop up.
- Remove the memory module and replace as needed.

To reassemble your device, follow these instructions in reverse order.
