## TOOLS:

- [64 Bit Driver Kit](#) (1)
-

## Step 1 — Fans

- Unscrew the base cover.

## Step 2

- Remove the base cover.

### Step 3

- Unplug the battery cable by gently tugging it.

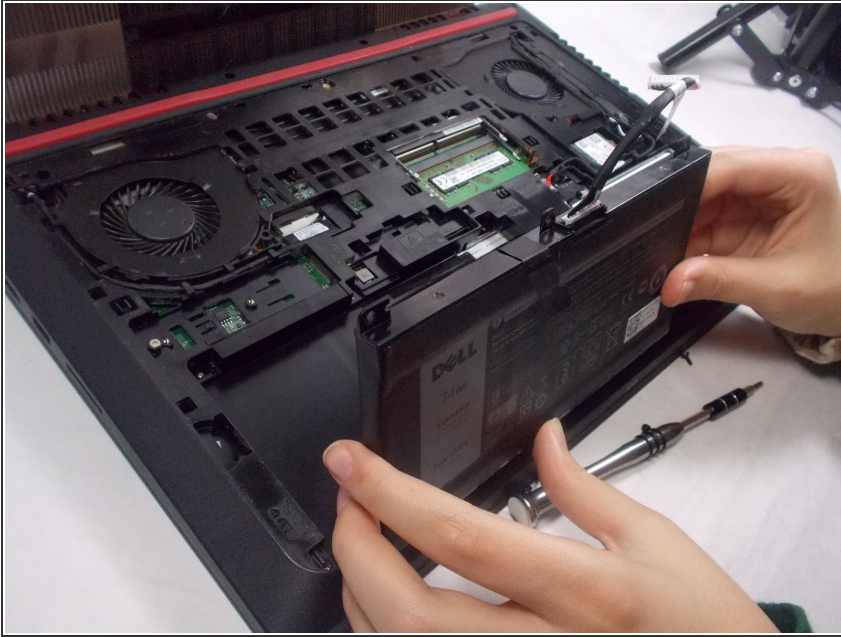

### Step 4

- Loosen the screws that secure the battery in place.

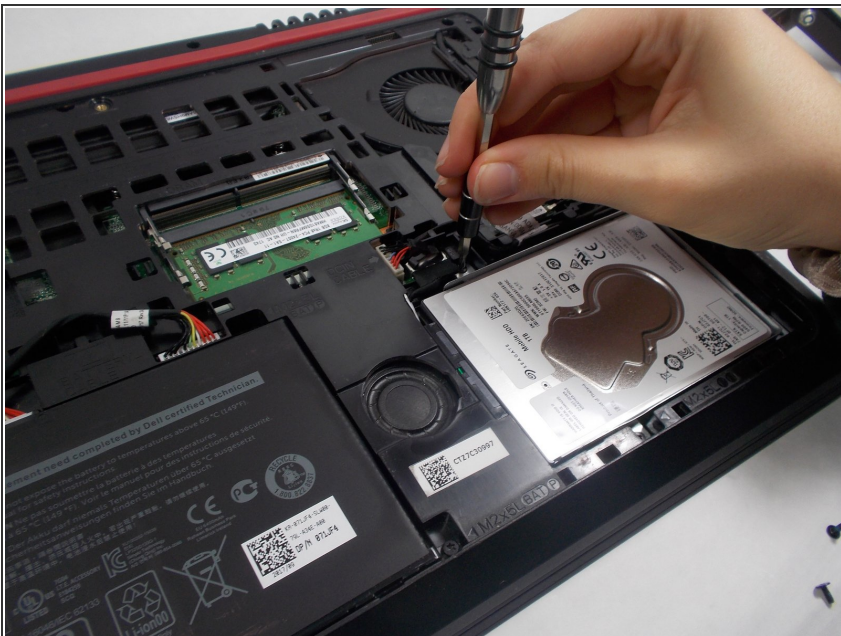

## Step 5

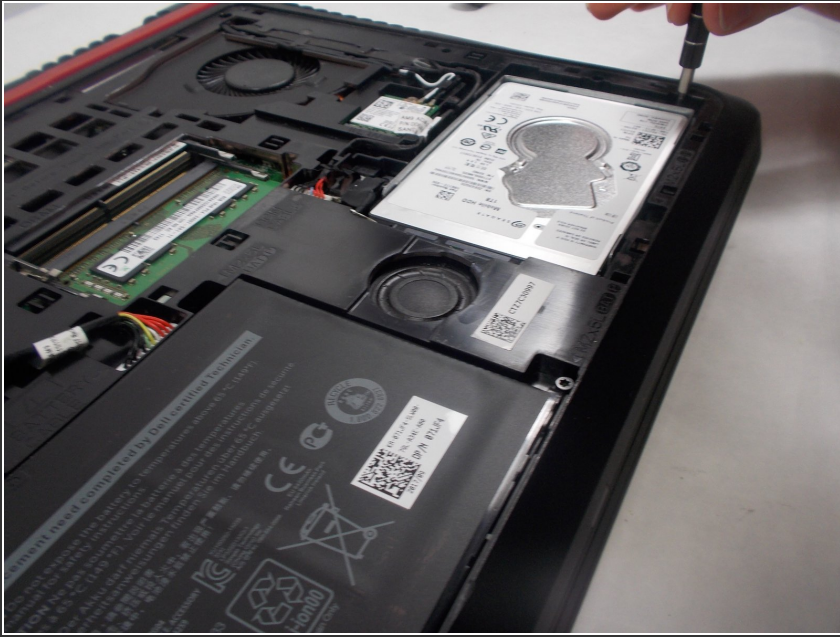

- Pull the battery out of the laptop.

## Step 6

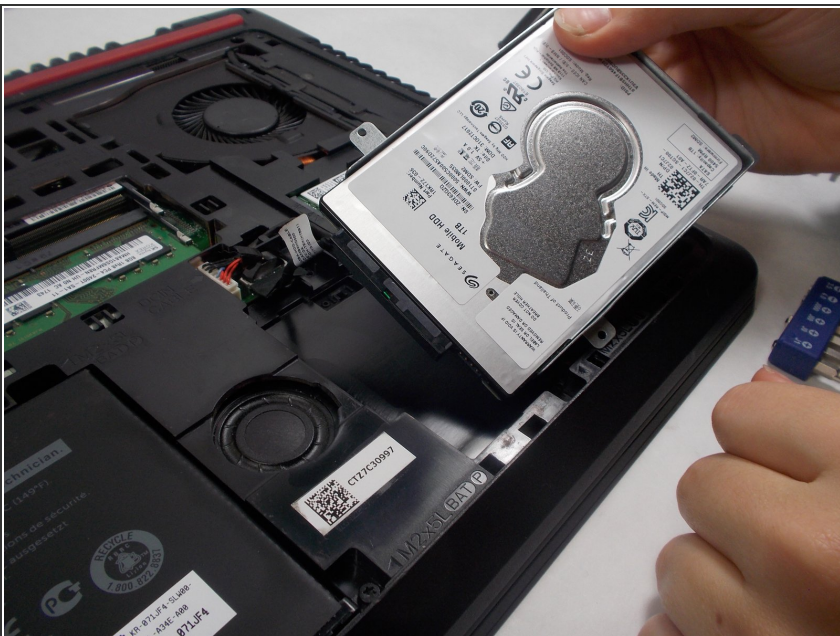

- Remove the cable above the hard drive.

## Step 7

- Loosen the screws that secure the hard drive.

## Step 8

- Remove the hard drive.

## Step 9

- Flip the laptop over and open the lid. Remove the palm-rest.

## Step 10

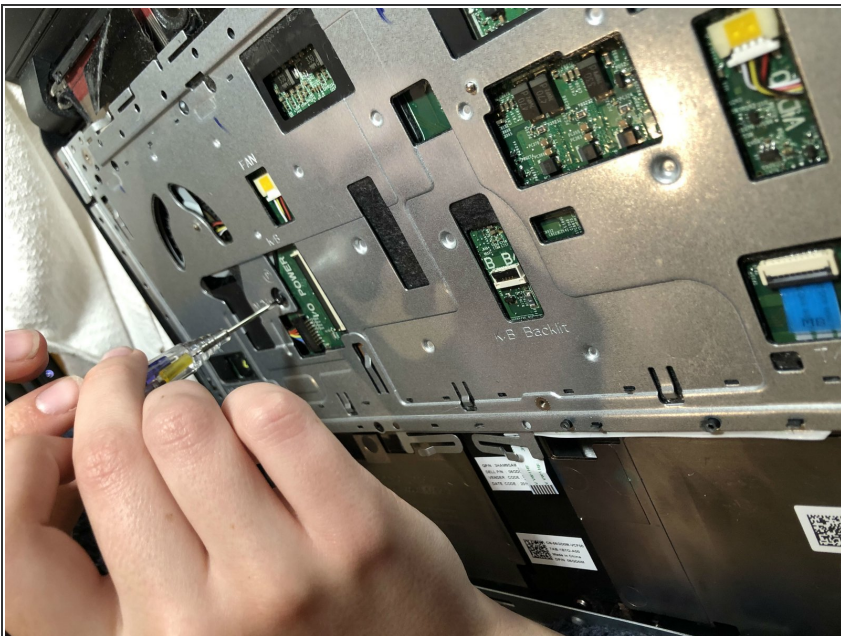

- Carefully unsecure the rest of the shell on the base of the computer.

## Step 11

- Remove the keyboard.

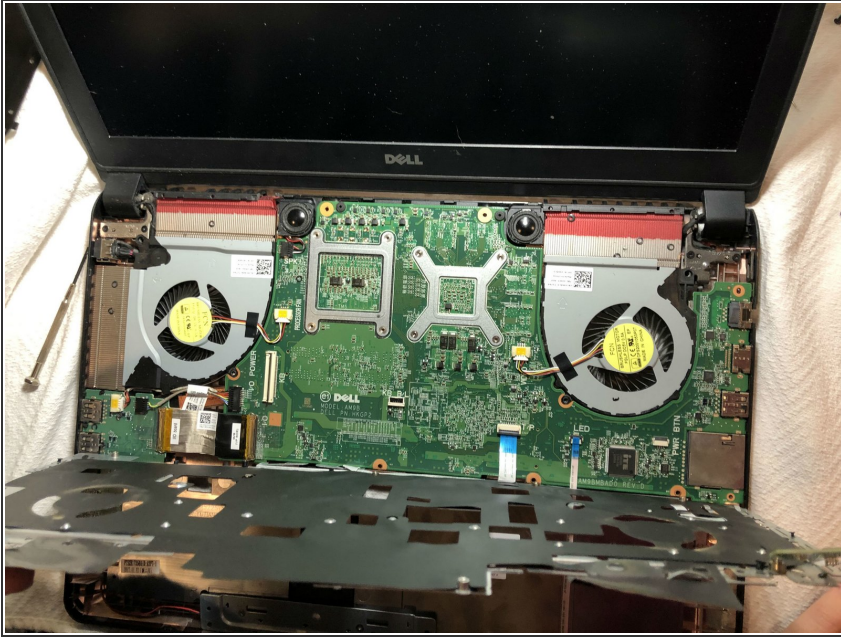

## Step 12

- Loosen the screws securing the metal plate and contents of the base.

## Step 13

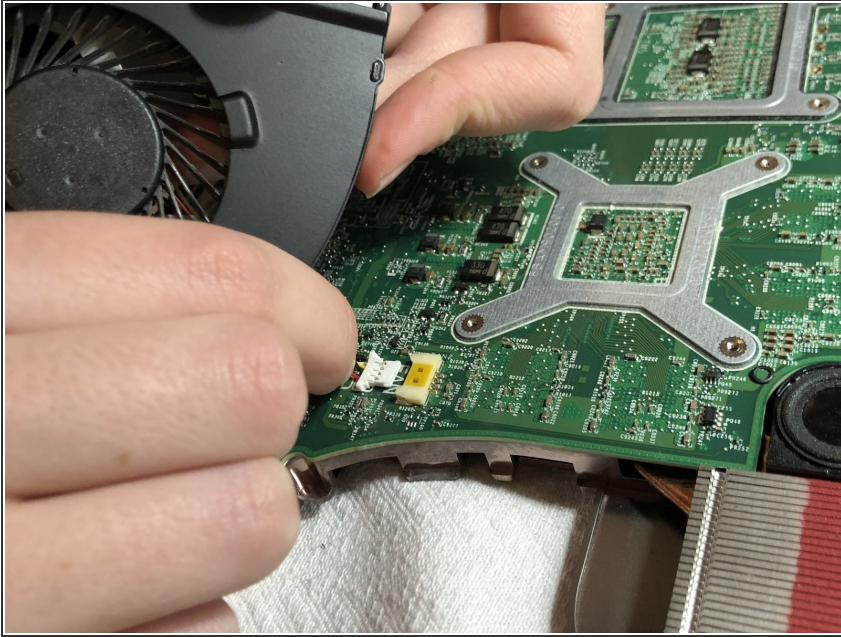

- Remove the plate.

## Step 14

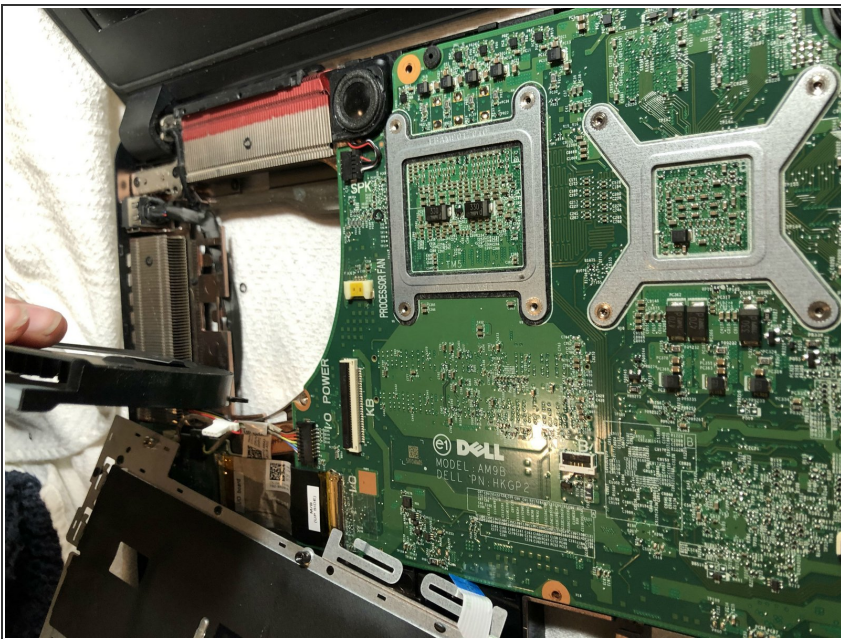

- Unscrew and remove the first fan from the base of the laptop.

## Step 15

- Remove the fan's cable from the board.

## Step 16

- Repeat steps 14 and 15 for the remaining fan.

To reassemble your device, follow these instructions in reverse order.
