Step 1 — Battery

⚠️ Make sure your laptop is powered off completely and is not connected to the charger.

- Close the laptop and place it so that the back of the screen is lying flat on your work surface.

- Slide both of the battery-release latches towards the outer edges of the laptop to unlock the battery flap.
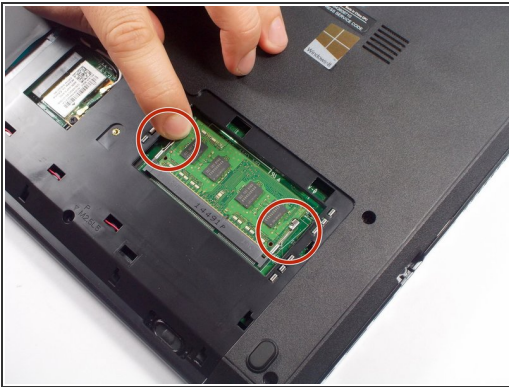

Step 2

- Lift the battery at an angle using your fingertips and remove it from the laptop.

- ⓘ Press and hold the power button for 5 seconds. This ensures that any remaining power will drain out of the computer.

Step 3 — Ram (Memory Module)

- Remove the bottom cover by removing the 4 mm screw using a PH-0 Phillips screwdriver that secures the base cover to the laptop base.

- Using the plastic opening tool, pry the base cover from the base.

- Slide the base cover towards you and remove it from the base. Put it aside.

Step 4

- Using your fingertips, pry the vertical sides of the memory module apart until the piece pops out of place.

- Slide the memory module out of its slot and lift it out of the laptop base.

To reassemble your device, follow these instructions in reverse order.
