Step 1 — Battery

📌 Before attempting to remove the battery ensure that the laptop is disconnected from all power sources and turned off.

● Turn the laptop over to its back.

Step 2

● Slide the release latch while simultaneously pulling backwards on the battery.

Step 3

- Slide the battery out of the battery bay.

Step 4 — Base Cover

- Unscrew the four screws (3mm Phillips #1) that hold the base cover in place.

- ⓘ The screws are connected to the base cover by a washer anddo not remove from the base cover.

Step 5

- Carefully lift the base cover vertically away from the laptop.

Step 6 — CPU Heat Sink

- Loosen the 5 screws (4mm, Phillips #1) that secure the CPU Heat Sink to the motherboard.

- ⓘ These screws are held in place by a washer so you should not be able to completely remove the screws.

Step 7
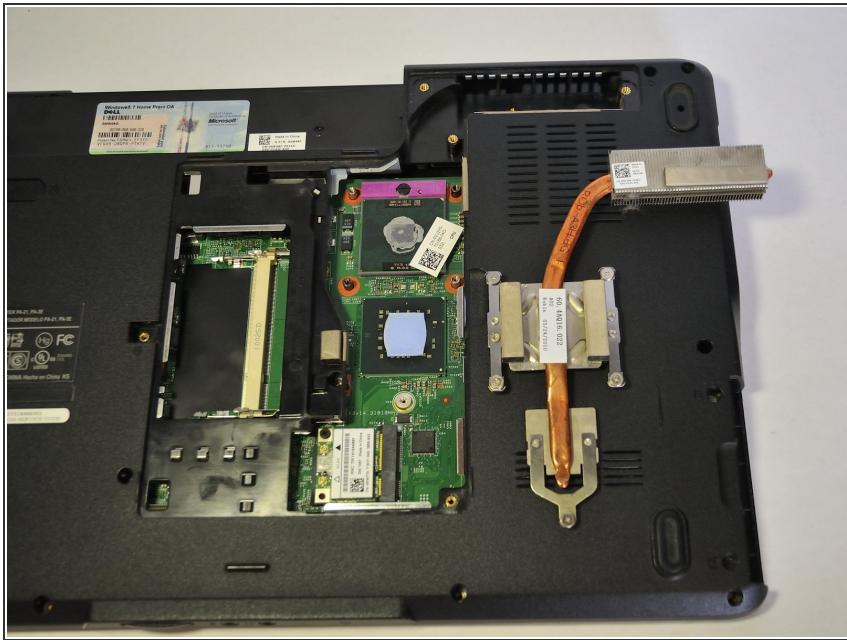

- Pull up on the Heat Sink unit to remove it.

Step 8 — Computer Processing Unit

- Using a flathead screwdriver, rotate the locking mechanism counterclockwise to the unlocked position.

Step 9

⚠ The CPU is very fragile and has thin pins.

● Remove the CPU by pulling straight upward and away from the laptop.

To reassemble your device, follow these instructions in reverse order.
