Step 1 — Loosen the Screw

⚠ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in "Before You Begin".
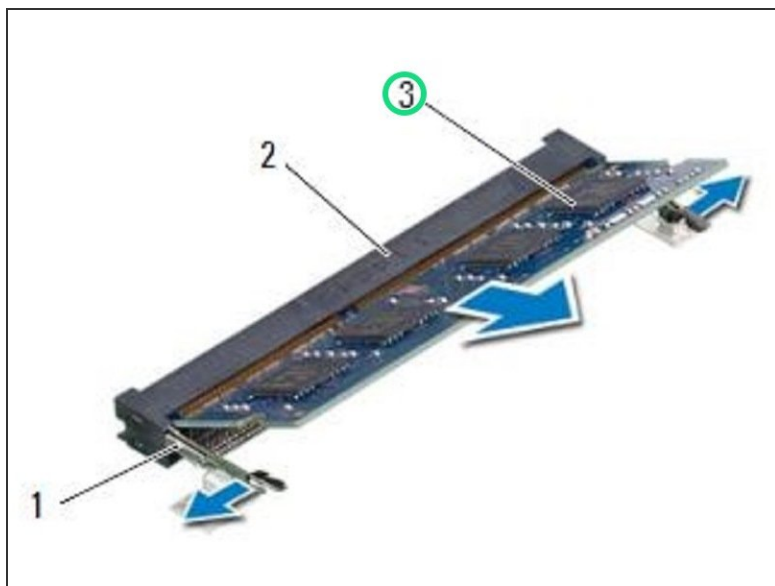

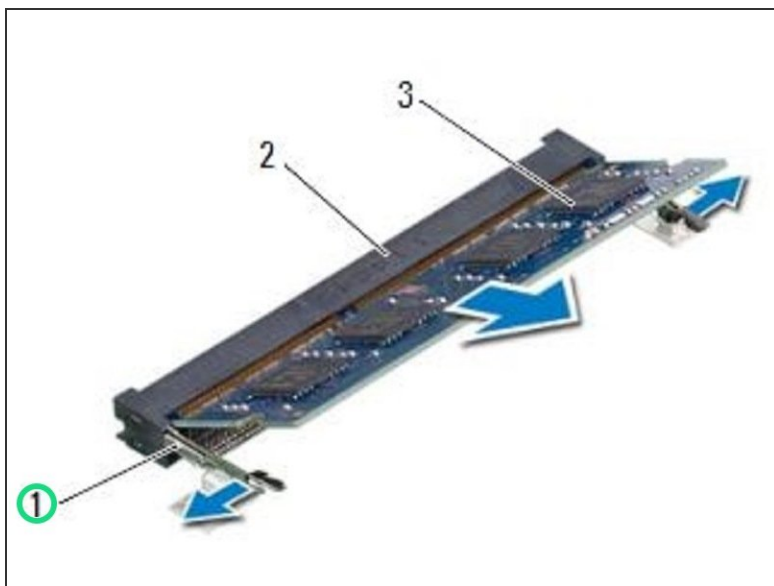

● Loosen the captive screw that secures the memory-module cover to the computer base.

Step 2 — Lifting the Memory Module Cover
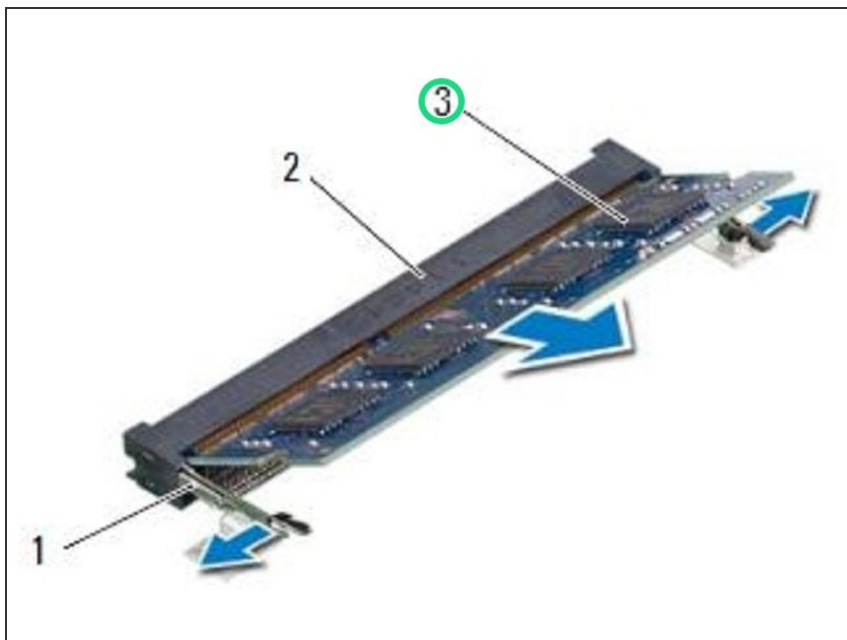

● Using your fingertips, lift the memory-module cover out of the slots on the computer base.

Step 5 — Align the Notch

● Align the notch on the **NEW** memory module with the tab on the memory-module connector.
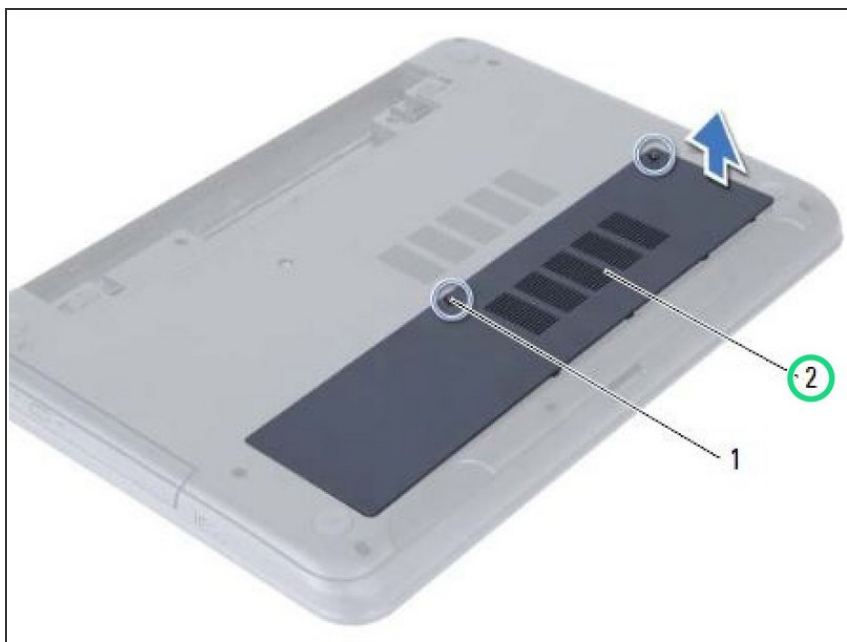

Step 6 — Sliding the Memory Module

● Slide the memory module firmly into the connector at a 45-degree angle and press the memory module down until it clicks into place.

ⓘ NOTE: If you do not hear the click, remove the memory module and reinstall it.

Step 7 — Slide the Tabs

- Slide the tabs on the memory-module cover into the slots on the computer base and snap the memory-module cover into place.

Step 8 — Tighten the Screw

- Tighten the captive screw that secures the memory-module cover to the computer base.
