

Dell Inspiron 5100 PP07L Memory Replacement

This guide will demonstrate how to replace the memory on a Dell Inspiron 5100 PP07L laptop.

Written By: May Chauvin

TOOLS:

- [Phillips #1 Screwdriver](#) (1)
-

Step 1 — Revealing the memory panel

- Flip the laptop on it's back, so that the bottom is facing up.

Step 2 — Screw Removal

- Loosen the single Phillips #1 screw.
 - ⓘ This screw is attached to the panel and cannot be removed.

Step 3 — Replacing the RAM

- Push the highlighted pin outward until the RAM pops slightly out of its socket.
 - Place the new chip in at a slight angle, and push it in and downward until little or none of the gold contacts are visible.
- ⚠ Not seating the new DIMMs correctly could cause the device to refuse to POST.

To reassemble your device, follow these instructions in reverse order.
