INTRODUCTION

In this guide it will be demonstrated how to replace the memory on a Dell Inspiron 910 laptop.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)

This document was generated on 2020-03-30 05:27:41 AM (MST).

Step 1 — Remove Battery

- Locate the release tabs located on either side of the battery, on the bottom of the laptop.

- Push the release tabs toward the center of the device.

- Remove the battery.

Step 2 — Preparation

- Remember to power off the device before starting!

- Disconnect any cables or external devices from the laptop, then flip it and remove the battery by pressing the battery tabs inward.

Step 3

- Locate the large black panel with two screws holding it in place. (This is the panel with ventilation holes)

- Unscrew both of the screws using a Philips Screwdriver.

Step 4

- Remove the panel by pulling upward.

  ⚠ Removal may require some force!

This document was generated on 2020-03-30 05:27:41 AM (MST).

Step 5

- After removing the panel, locate the memory modules.

- Look for the silver tabs on either side of the white plastic holding the RAM in place. Then gently remove the RAM.

Step 6 — For Reinstallation

- Depress the RAM until it locks into place; there should be an audible clicking noise when it does so and the gold contacts should be barely visible.

- ⓘ Congratulations! You have completed the guide.
