INTRODUCTION

In this section, you will observe how to very easily remove a damaged or malfunctioning keyboard. This breakdown of components can be done with ease: simply follow each step using the required tools. Tools needed are:

- Spudger
- Screwdriver
- Bit J00

⚒ TOOLS:

- Spudger (1)
- JIS #00 Screwdriver (1)

Step 1 — Keyboard

- Locate the keyboard and the led display cover.

- Using the prying tool, go to the furthest right side of the keyboard cover and wedge upwards to lift the component out.

- Locate the two M2.5X5mm screws and loosen using the J00 bit.

Step 2

- Locate the tab above the F7 and F8 keys.

- Pull up and toward the screen to remove the keyboard from the main component.
