## INTRODUCTION

Before you begin the RAM replacement process, be sure to ground yourself. Grounding yourself prevents short circuiting the device, and/or shocking yourself. An easy way to do so would be to remove one of your shoes.

### TOOLS:

- [2 Hands](#) (1)
  - [Phillips #0 Screwdriver](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Battery

- Push the sliding button near the battery compartment.

## Step 2

- Slide the button next to the battery and lift up on the lip of the battery edge.

## Step 3

- Lift and remove the battery.

## Step 4 — RAM

- Remove the two M2x3mm screws from the center panel on the back of computer with a Phillips #0 screwdriver head.

## Step 5

- Use a plastic opening tool to pull up and remove the center panel.

## Step 6

- Pull the two clips on either side of the memory sticks.

## Step 7

- Slide the memory sticks out of their clips.

To reassemble your device, follow these instructions in reverse order.
