

# Fender Starcaster Tuning Heads Replacement

Written By: Christopher Hartigan

---

## INTRODUCTION

If the tuners have broken, become excessively loose, or seized, they will require replacement.

---

### TOOLS:

- [Small Needle Nose Pliers](#) (1)
  - [Flush Cutter](#) (1)
  - [Phillips #0 Screwdriver](#) (1)
  - [Smart Wrench](#) (1)
-

## Step 1 — Loosen the Strings

- Start by loosening the strings. This is done by turning the tuning knob until the string has lost tension.
- Repeat this for all six strings on the guitar.

## Step 2 — Remove the Strings from the Tuning Pegs

 Be mindful of the string ends. They may be sharp and could puncture your skin.

- It may be necessary to use pliers to remove string ends from the tuning peg.

### Step 3 — Remove the Strings from the Bridge

- After removing the strings from the tuning pegs, slide the strings through the bridge and out of the back of the guitar.
- If the twists in the string ends are in the way, use wire cutters to snip them off. This will allow the heavier strings to pass through the bridge easier.

### Step 4 — Tuning Heads

- Using a wrench, remove the nuts around each tuning head post.

## Step 5

- Next, remove the threaded retainer sleeve from each post.
- Don't forget the washer.

## Step 6

- Next, remove the screws from the backside of each tuner.

## Step 7

- Finally, remove the tuning machine assembly from the headstock.

To reassemble your device, follow these instructions in reverse order.
