## INTRODUCTION

After too many charging cycles, the battery's capacity will be decreased. This is true for any Lithium-ion battery. Luckily the replacement of the battery in this device is very simple.

### TOOLS:

- [Phillips #0 Screwdriver](#) (1)
- [Spudger](#) (1)

## Step 1 — Motherboard Removal

- To open up the casing, you will need to unscrew the four Phillips #0 15mm screws which are accessible from the back.

## Step 2

- Gently separate the two halves of the casing.

## Step 3

- Disconnect the battery from the motherboard by lifting up on the white plastic tab on the top of the connection.
- Gently pull the cord out by the white plastic adapter. Do not pull from the red and black cord.

## Step 4

- Unscrew the Phillips four #0 15mm screws to free the motherboard from the casing.

## Step 5

- Slowly pull the motherboard out of the casing. Make sure the loose battery wire doesn't get snagged.

## Step 6 — Battery

- Remove the four #0 15mm screws to release the battery housing from the case.

## Step 7

- Take the battery housing and battery out of the casing.

To reassemble your device, follow these instructions in reverse order.
