

Fossil Speedway Watch TI-5061 Watchband Link Replacement

This repair guide will teach you how to replace one of the links on the watchband.

Written By: Zachary Price

INTRODUCTION

Sometimes the band links will become rusted or scratched. To preserve the beauty of the titanium watch, you can replace a the damaged link with a new one.

TOOLS:

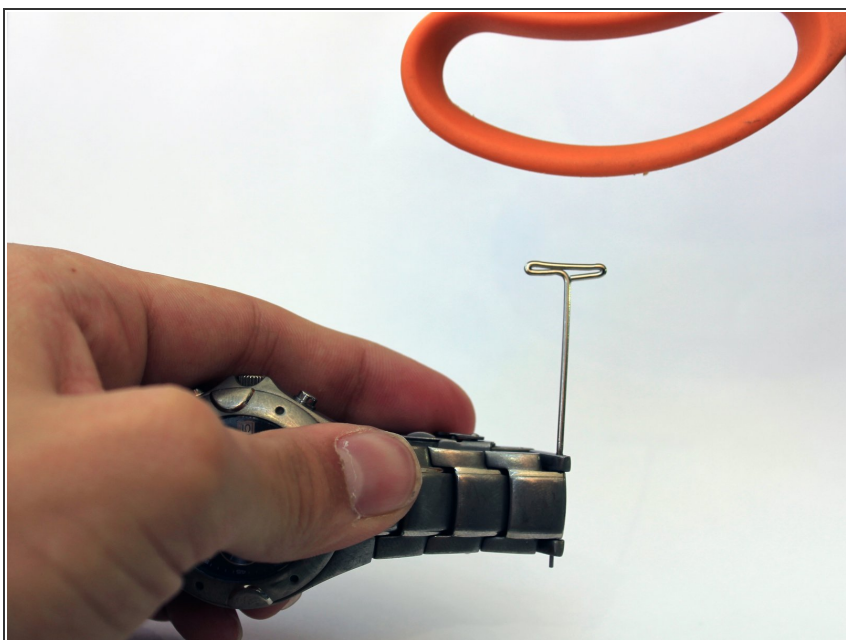

- [Push Pin](#) (1)
 - [Utility Scissors](#) (1)
-

Step 1 — Band Link

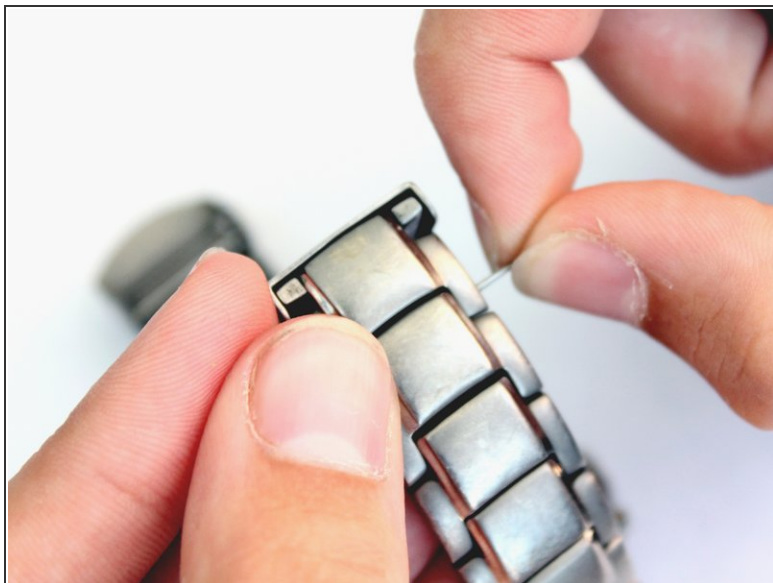

- Locate the link on the band with arrows pointing in opposite directions.
- Place push pin into the hole on one side of the link.

Step 2

- Hit the push pin with the blunt object (we used scissors) until the small metal rod sticks out from the link.
- Pull the rod out using your fingers.
- Repeat on the other side to remove the entire link.

Step 3

- ☒ To replace the link, insert the open end of one of the connected links into the open end of the new link.
 - Place the rod into the aligning holes and use the blunt object to hammer the rod into the link.

Step 4 — Watchband Link

- Repeat on the other side of the link to remove it completely.

To reassemble your device, follow these instructions in reverse order.
