INTRODUCTION

Replace the LCD screen if you are experiencing blurry pictures, or if you have a cracked screen.

🔧 TOOLS:

- Phillips #000 Screwdriver (1)
- iFixit Opening Tools (1)

Step 3

- Rotate camera to the side where the speaker ports are located.

- Remove the three 4 mm screws with a Phillips #000 screwdriver.

Step 4

- Turn the camera to the opposite side where the HDMI port is located.

- Remove all five 4 mm screws with a Phillips #000 screwdriver.
Step 5

⚠️ Casing is fragile.

- Utilize the plastic opening tool to pry in between the back casing of the camera from the front casing.

- Continue this motion around the camera to create a wedge between the front and back casing of the camera.
Step 6

- Use force to pull apart the back casing from the camera.

Step 7

● Remove the two 4 mm screws that hold the motherboard and metal plate in place.

Step 8

● Utilize the plastic opening tool to gently lift the LCD screen away from the metal plate.

● Flip over LCD screen so that the left side of the metal plate is visible.

Step 9

- (i) Rotate the camera vertically so that it is easier to manage.

- Use a Phillips #000 screwdriver to remove the two 4mm screws that are located on the metal plate under the LCD screen.

Step 10

- Detach the metal plate from the motherboard.

Step 11

⚠️ The orange ribbon cable is fragile.

● Pull back the small black latch connecting the orange ribbon cable to the motherboard.

● Gently remove the LCD screen from the motherboard.

To reassemble your device, follow these instructions in reverse order.
