INTRODUCTION

Before you get started with this procedure, have a place to store screws in an organized fashion. There are many screws involved in this procedure that you don't want to get mixed up.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Tri-point Y0 Screwdriver](#) (1)

Step 1 — Rear Cover Casing

- Use the Phillips PH00 screwdriver to remove all the 0.5mm screws on the side.

Step 2

- Use the Tri-point Y0 screwdriver to remove the two 0.5mm screws on the horizontal axis.
- Remove the other two 0.5mm screws on the bottom with the PH00 screwdriver.

Step 3

- Once you unscrew all of the screws, carefully remove the rear casing.
- ⚠** Be careful not to pull the rear casing, otherwise you will rip the ribbon cable.
- Detach the ribbon cable by lifting the tab on the connector.

To reassemble your device, follow these instructions in reverse order.
