

# GIGABYTE 15.6" P55Wv6-NE2 Disassembly

Picked up this laptop on black friday and had to take a look inside!

Written By: Justin Koch

## INTRODUCTION

This is a basic disassembly guide and parts overview of the GIGABYTE 15.6" P55Wv6-NE2. Mine shipped with a 128GB Lite-On M.2 2280 SSD and a no-name 1TB HHD. The laptop does support NVME M.2 SSDs. It came with 1-16GB SODIMM by Crucial leaving room to expand upto the supported 32GB. I plan on adding an additional 16gb of ram, replace the M.2 SSD with a Samsung 960 Evo 250GB NVME SSD and a 1TB Samsung 850 2.5" SSD.

### TOOLS:

- Phillips #00 Screwdriver (1)
- Essential Electronics Toolkit (1)

### PARTS:

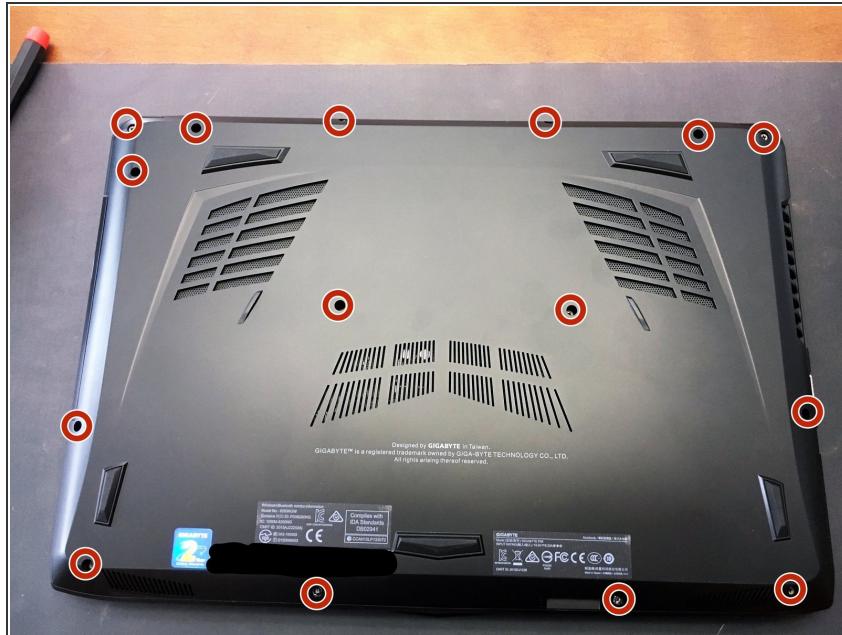

- Crucial CT16G4SFD824A (2)  
**DDR4 SODIMM**
- Samsung 960 M.2 250GB NVME SSD (1)  
**M.2 2280 NVME SSD**  
*1 M.2 2280 SSD Slot*
- Samsung 850 Evo 1TB SSD (1)  
**2.5" SSD**  
*1- 2.5" HHD or SSD Slot*

## Step 1 — Overview

- As with all electronics, ensure that you are in a static free environment, and the computer is turned off.

## Step 2

- Use a PH00 to remove the 15 Screws holding in the bottom cover. There are no large clips holding in the back cover, so gentle pressure should release it.

## Step 3

- There are 2 SODIMM Slots, Mine came with 16GB of Crucial Memory.
- The M.2 2280 SSD that mine came with was a Lite-On. The 2.5" 1TB HHD was nondescript.
- The wifi chip is an Intel 8260NGW

To reassemble your device, follow these instructions in reverse order.
