

# Garmin Drive 60LM Speaker Replacement

This guide will show you how to efficiently and safely replace the speaker in your Garmin Drive 60LM.

Written By: Andy Flores

## INTRODUCTION

To replace the speaker in your device you will need a T4 Torx screwdriver, a metal spudger, a plastic spudger, and a replacement speaker. Be sure to have a large workspace to avoid mishandling or damaging the device components.

### TOOLS:

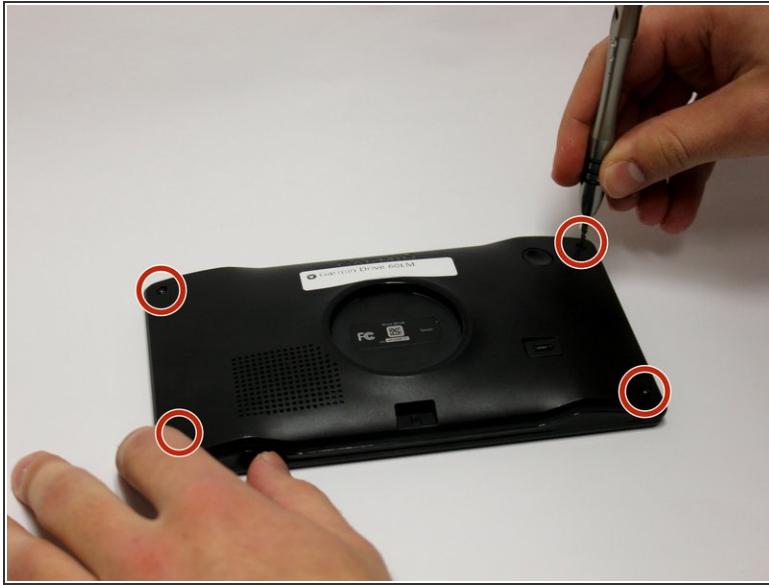

- [T4 Torx Screwdriver](#) (1)
- [Metal Spudger](#) (1)
- [Spudger](#) (1)

### PARTS:

- [Speaker](#) (1)

## Step 1 — Speaker

- Using the T4 Torx screwdriver, unscrew all four of the screws (1/4 inch, 6.35 mm) from the back panel of your device.

## Step 2

- Remove the back panel using the metal spudger tool.

**i** You will not be able to remove the back panel entirely. Make sure to separate the back panel slowly so that you do not rip the orange ribbon inside.

**!** The metal spudger tool can cause damage to internal components.

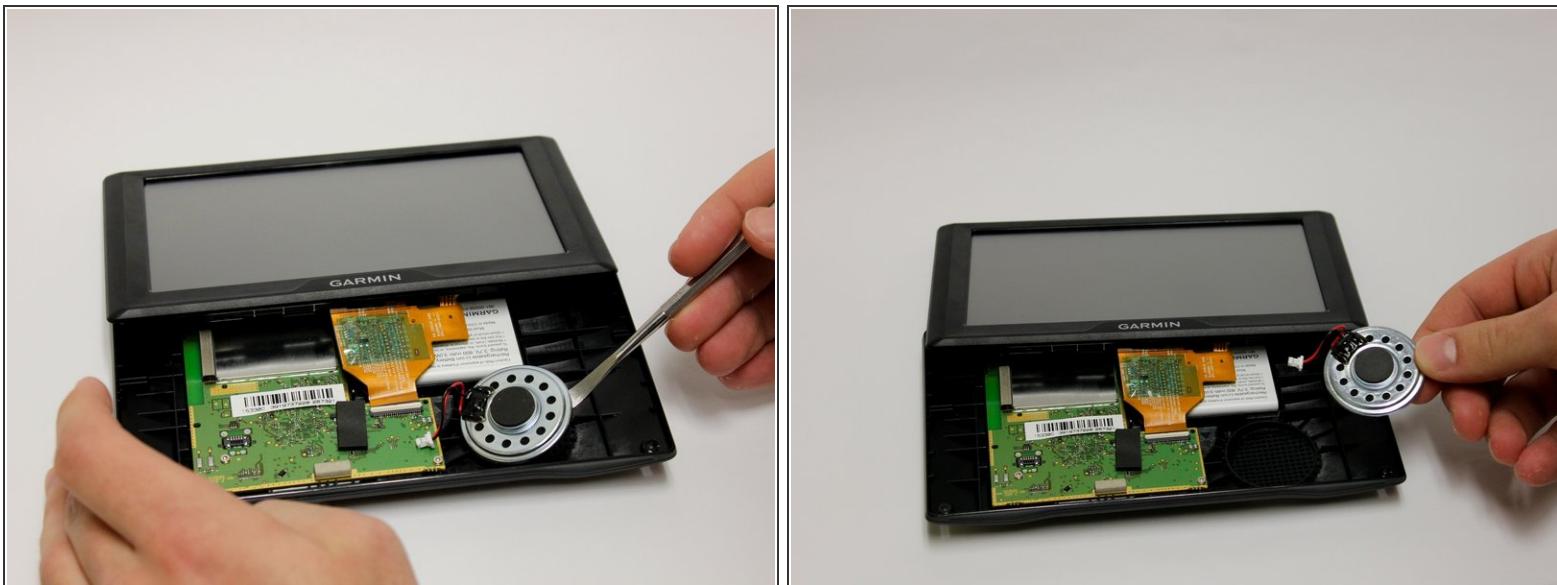

- Flip the device over with the screen facing upward and open the device.

## Step 3

- Use a plastic spudger tool to lift the wires from behind the motherboard.
- Carefully disconnect the wires attaching the speaker to the motherboard using your fingers.

## Step 4

- Using a plastic spudger and your fingers, remove the speaker from the device.

To reassemble your device, follow these instructions in reverse order.
