## INTRODUCTION

This guide will show you how to replace your laptop's hard drive.

### TOOLS:

- JIS #0 Screwdriver (1)

## Step 1 — Hard Drive

- Unscrew all .5mm screws from the back rectangular panel. Use a J0 screwdriver.
- (i)* Screws will not come out all the way out. Simply unscrew until they do not come out any further.

## Step 2

- Firmly press with your hand on the silver surface and pull back, dislodging the hard drive from its port.

## Step 3

- Remove the four 1.2mm screws attaching the case to the hard drive. Use the same J0 screwdriver.

## Step 4

- Pull out the old hard drive.

To reassemble your device, follow these instructions in reverse order.
