Step 1 — RAM

- Use the J0 screwdriver to remove the five 2mm screws holding the back plate.
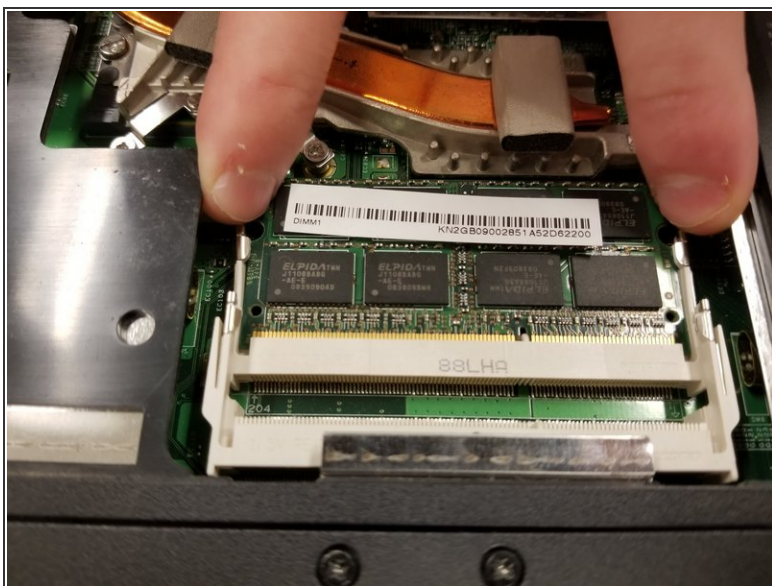

Step 2

- Push the upper RAM module's two pins outwards at the same time.
  - If done correctly, the module should lift.

Step 3

- Grab onto the module and pull away in a straight direction.

Step 4

- Push the lower RAM module's two pins outwards at the same time.
  - If done correctly, the module should have lifted.
