

# GoPro Hero 3 Silver Motherboard Replacement

These simple steps will guide you in order to replace your GoPro's motherboard.

Written By: Brian Alvarez

 **TOOLS:**

- [T4 Torx Screwdriver \(1\)](#)
- [Spudger \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

 **PARTS:**

- [GoPro Hero3 Silver Motherboard \(1\)](#)
- [GoPro Hero3 Silver Front Panel \(1\)](#)

## Step 1 — Battery

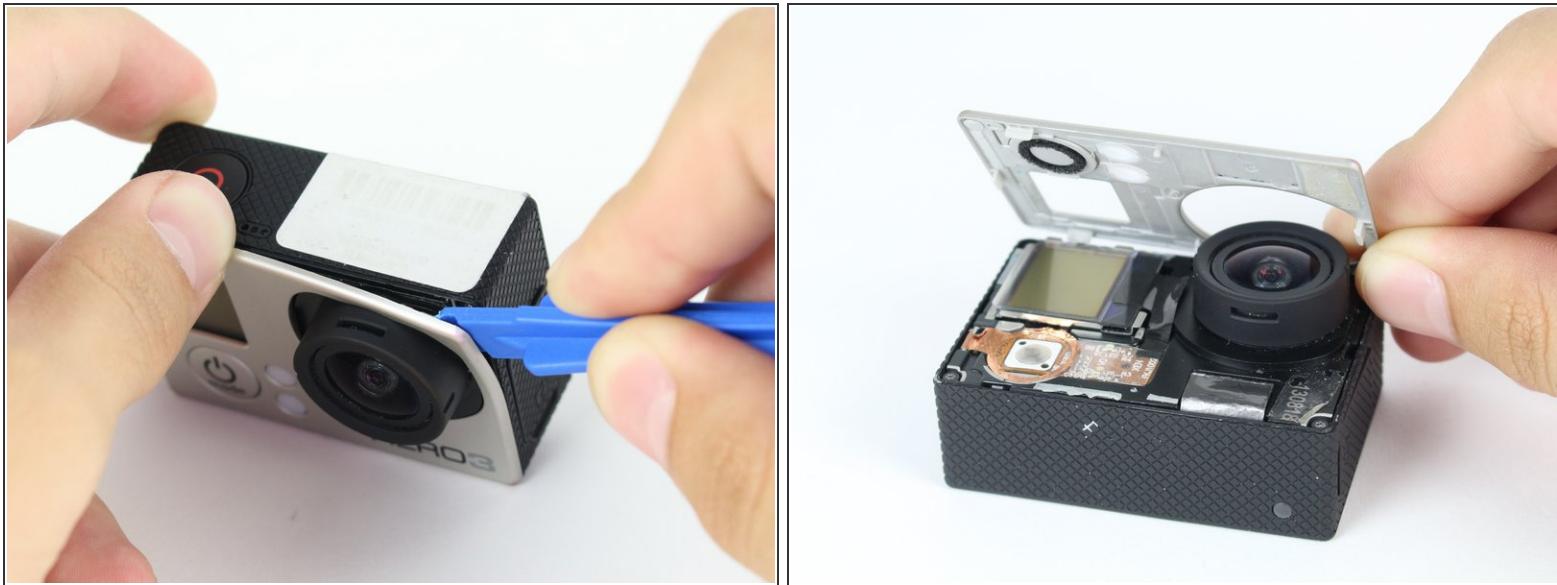

- Pull back on the tab on the back of GoPro to open the battery cover.

## Step 2

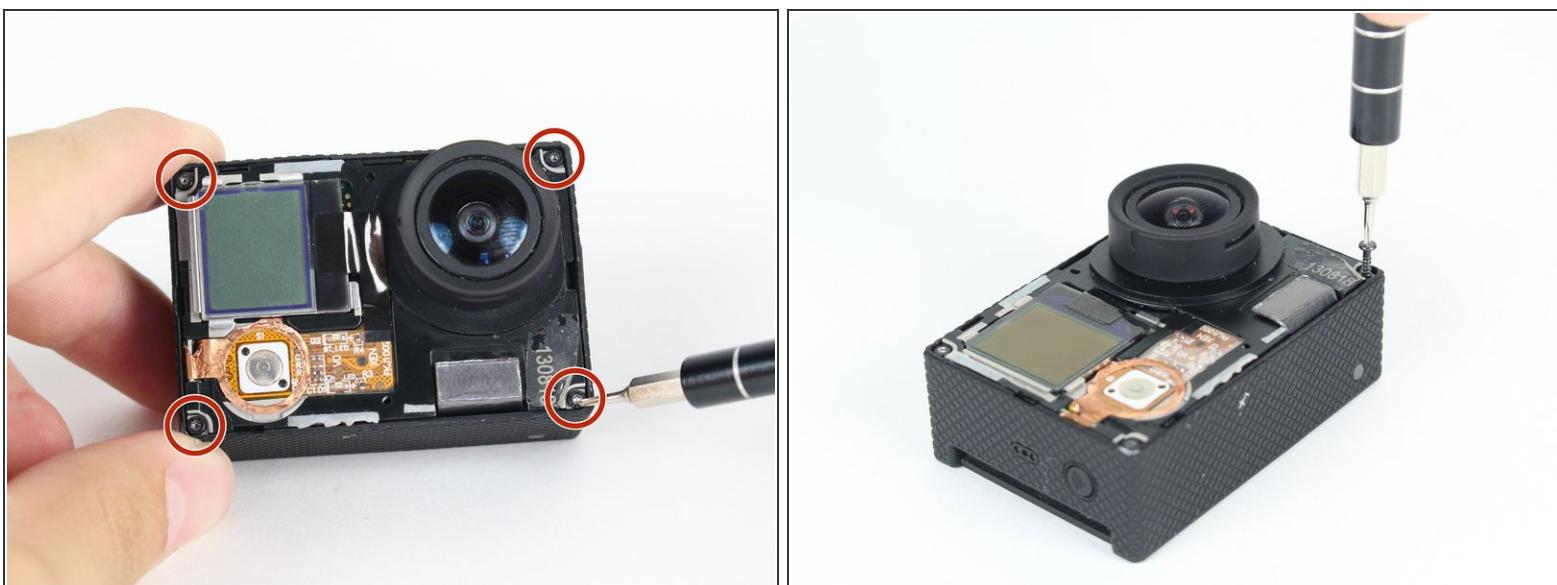

- Pull the battery out using the tab.

## Step 3 — Motherboard

- Use the plastic opening tool to remove the faceplate.
- There is some adhesive and clips so be careful and the faceplate should pop right off.

## Step 4

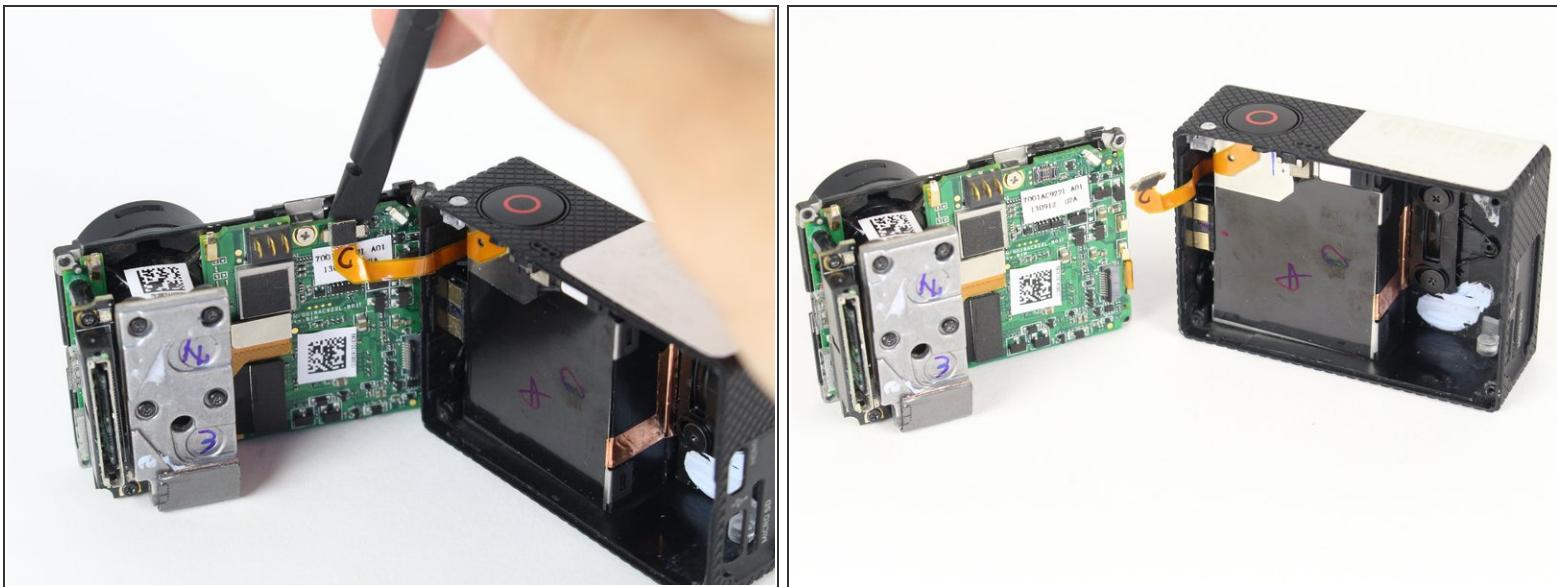

- Now that the faceplate is off, it is time to remove the 4 screws on each corner.
- Use the T4 tool bit from the iFixit toolkit in order to remove the 4 screws on each corner.

## Step 5

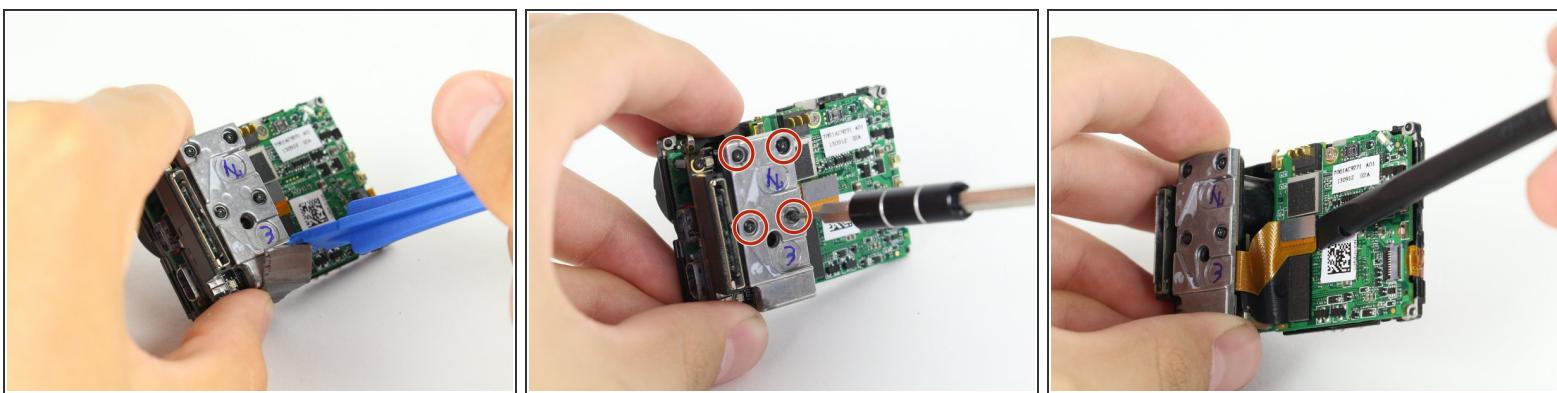

- Note: Make sure you remove the door cover of the USB, mini HDMI, and SD port before. Separating the motherboard will be easier.
- Using the plastic opening tool, slowly pry open the motherboard assembly.

## Step 6

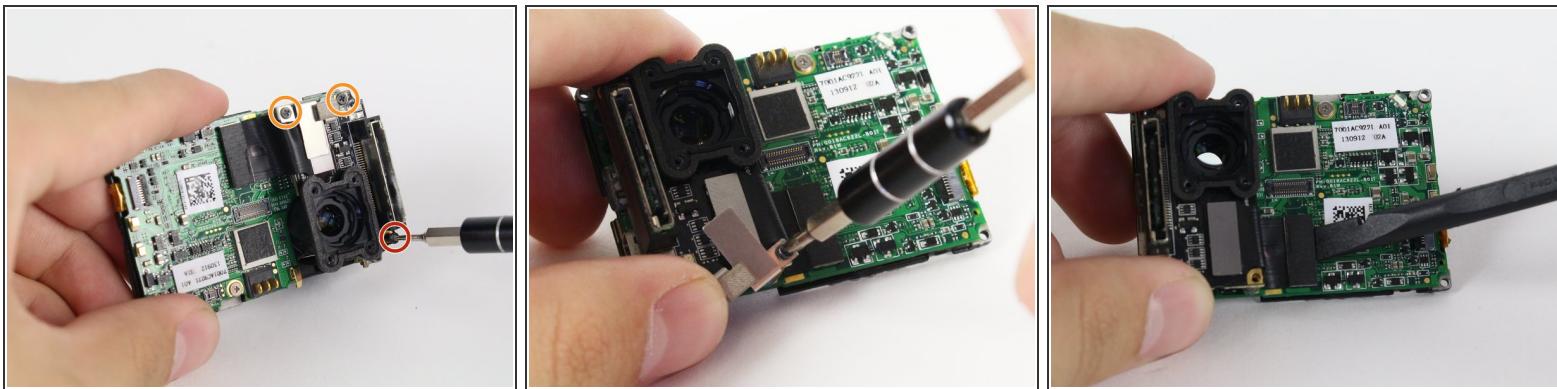

- Use the spudger to gently pry off the connector of the housing to the motherboard.
- You should now have the motherboard assembly and the housing separated.

## Step 7

- Use the spudger to remove the heat shield tape and detach the image sensor from the motherboard.
- Using the T4 Torx toolbit, remove the 4 screws that connect the sensor to the lens.
- Remove the silver connector of the image sensor from the motherboard using the spudger to pry it off.

## Step 8

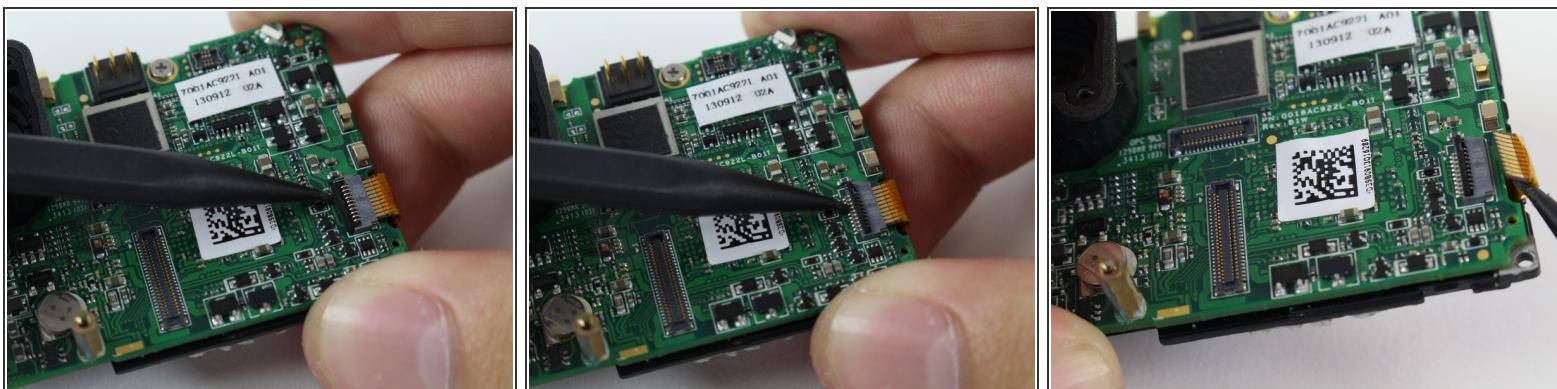

- The media adapter is attached to the motherboard via 3 screws:
  - x1 T4 Torx
  - x2 Phillips #00

⚠ There's a little silver bracket that is held down by the Phillips #00 screw so be careful not to lose it.

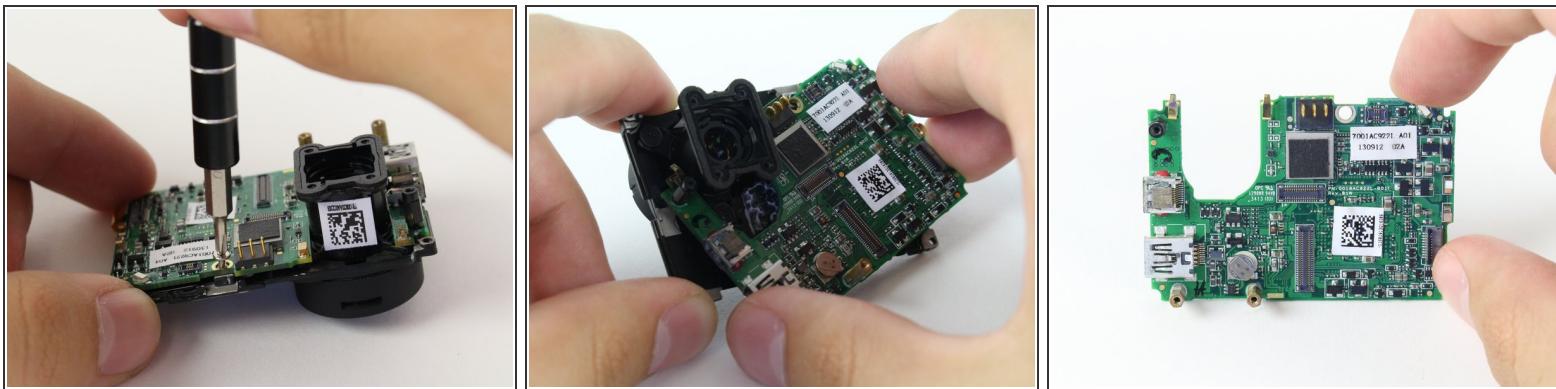

- With a little prying, use the spudger to detach the media adapter's connector from the motherboard.

## Step 9

- Use the spudger to lift the black tab up to unlock.
- Then remove LCD screen connector by sliding out.

## Step 10

- Using the Phillips head bit, remove the silver screw near the top edge of the board.
- Separate the LCD assembly by pulling it away. You should have the bare motherboard!

To reassemble your device, follow these instructions in reverse order.
