INTRODUCTION

Replacing the harness for the GoPro camera is fairly easy. We will tell you how to remove the stabilizer which holds the harness, how to remove camera from the harness, and how to replace the harness itself.

🔧 TOOLS:

- 4mm Allen Wrench (1)

Step 1 — Stabilizer

- Locate stabilizer collar's unlock and lock symbols. Twist the collar counterclockwise to unlock the stabilizer from GoPro Karma body.

- (i) Place the GoPro Karma on a stable surface with the legs folded in and the stabilizer facing towards yourself.

Step 2

- Remove the stabilizer by pulling the entire stabilizer out of the drone body.

Step 3 — Harness

- Place finger on the tab to open the harness and remove the camera.

⚠ Be sure to pull the camera straight out lest you damage the connectors.

Step 4

- Using a Hex 2.0mm screwdriver, remove the two 12 mm hex screws closest to the harness.

This document was generated on 2019-11-15 09:11:01 PM (MST).

Step 5

- Pull the harness off of the stabilizer.

⚠ Be sure to pull the harness straight off lest you damage the connector.

To reassemble your device, follow these instructions in reverse order.
