

GoPro Karma Propeller Replacement

Use this guide to remove and replace your broken propellers.

Written By: Jay Ingram

INTRODUCTION

The propellers are a very common broken part due to their relative fragility on a drone. Luckily, it is a very easy replacement, and the drone even comes with a few spares. The GoPro Karma wrench is a tool that comes with the drone to hold the motor in place to remove the propellers. Spare ones can be bought on ebay but are not available for purchase from the GoPro site.

Step 1 — Battery

- Hook your fingers on the tab and pull out the battery.

Step 2 — Stabilizer

- Locate stabilizer collar's unlock and lock symbols. Twist the collar counterclockwise to unlock the stabilizer from GoPro Karma body.

ⓘ Place the GoPro Karma on a stable surface with the legs folded in and the stabilizer facing towards yourself.

Step 3

- Remove the stabilizer by pulling the entire stabilizer out of the drone body.

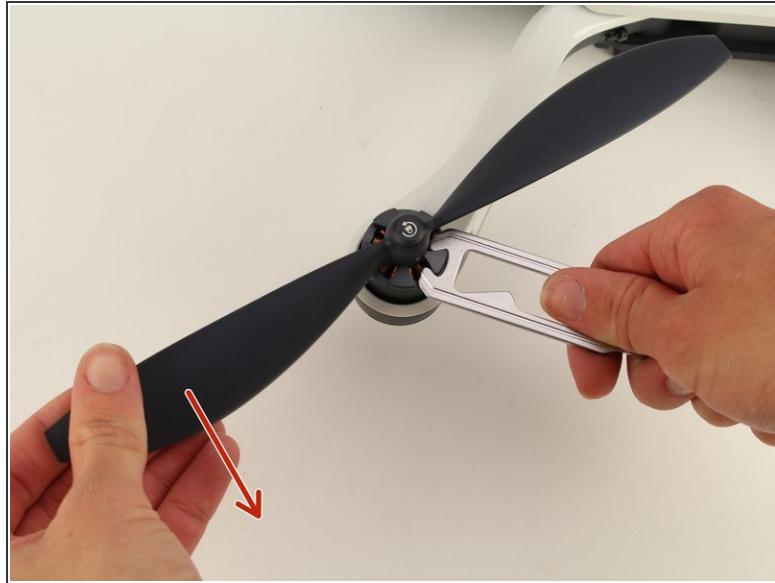

Step 4 — Propeller

(i) Extend the arms and set the drone face up.

- The front right and back left propellers unscrew clockwise.
- The front left and back right propellers unscrew counterclockwise.

Step 5

- Place the GoPro Karma wrench on the motor.
- Hold the motor in place with the wrench and unscrew the propeller in the indicated direction.

To reassemble your device, follow these instructions in reverse order.
