INTRODUCTION

This guide will show you how to replace a faulty cup-holder unit. The plastic lock pieces can be difficult to fully move, so be prepared to apply a lot of force to move them.

Step 1 — Cup-holder

- Pull the plastic lock pieces that secure the cup-holder on both sides of the stroller.

Step 2

- Slide the plastic lock sticks (attached to the cup-holder) down and out of the lock on both sides.

Step 3

(i) At this point, it is easier to lay the stroller down so that the bottom of the cup-holder faces up.

- Locate the black tabs on the underside of the cup-holder.
- Push the tabs towards the center of the cup-holder to detach it and push the cup-holder towards the top of the stroller to take it off.

To reassemble your device, follow these instructions in reverse order.
