HP Compaq 515 Keyboard Replacement

The keyboard may need to be replaced of some of the keys don't respond when they are pushed.

Written By: Kirsten Harnden

INTRODUCTION

Removing the keyboard takes some patience but it isn't outrageously difficult. The only tools needed for this replacement guide are the PH1 screwdriver bit and the plastic spudger. Make sure to keep the two screws that are removed in a safe place so you don't lose them. Make sure the device is off before starting this guide. Be careful to not be too aggressive with the keyboard, it does take some force to separate it from the rest of the device but try to still be as gentle as possible.

🔧 TOOLS:

- Phillips #1 Screwdriver (1)
- Spudger (1)

Step 5

- Gently use a plastic spudger to remove the keyboard from its holders

- ⚠ Be careful as there is a wire connecting the keyboard to the laptop

Step 6

- Carefully unclip and remove the large black wire that is connecting the keyboard to the laptop

To reassemble your device, follow these instructions in reverse order.
