INTRODUCTION

Hard drives are mechanical and begin to fail with age. Drops and physical damage can cause the drive to fail sooner. Follow this guide to the replace the hard drive. When replacing the hard drive, the Torx screws will be transferred to the new drive.

🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)

Step 1 — Battery

⚠️ Ensure the laptop is completely powered off and power adapter is unplugged before removing the battery.

● Turn over laptop so that the bottom is showing.

● Unlock the latch.

Step 2

● Remove the back cover and you will then be able to see the battery.

Step 3

- Unlatch the two latches securing the battery in the case.

Step 4

- Use a plastic opening tool to lift and remove the battery.
