Step 3

- Locate the cover hinge on the right side of the printer.

- Pull the hinge off of the scanner to allow the scanner to open to 90 degress.

Step 4
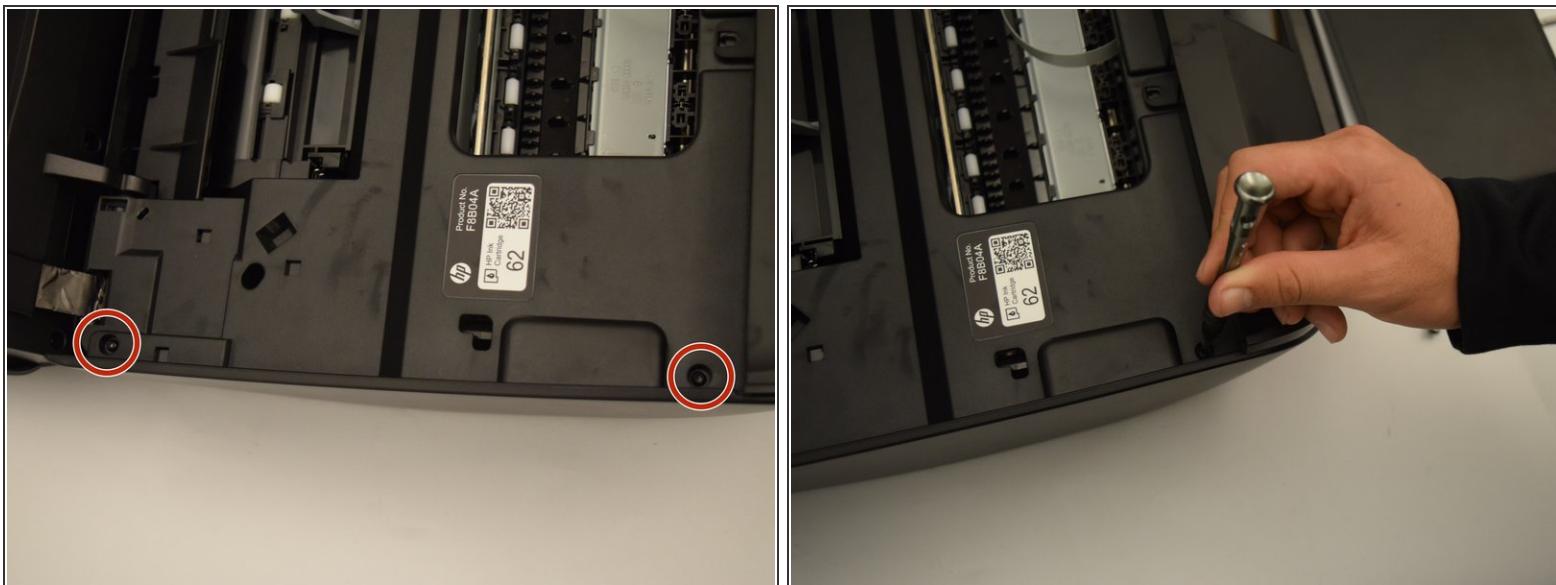

- Remove the 12 mm screws on the left side of the printer with a T10 bit.

Step 5
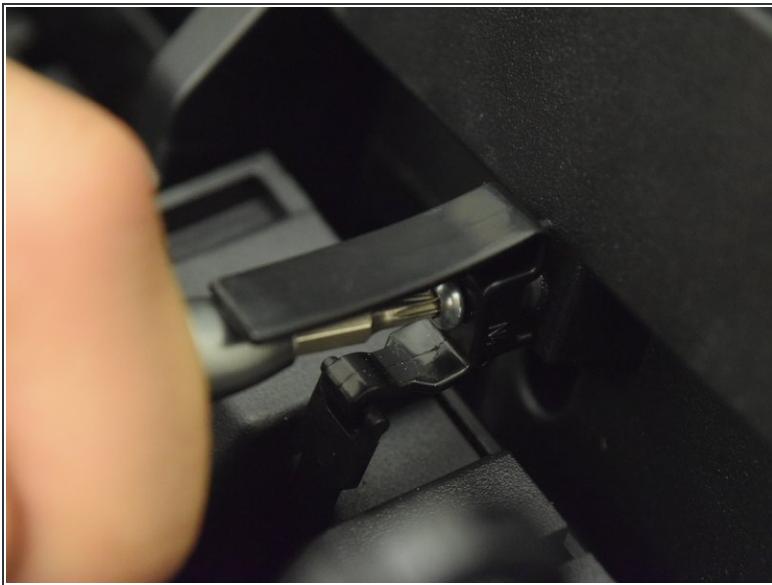

- Remove the 11.5 mm screw with a T10 bit to release the spring-loaded hinge.

⚠ Since this is a compression spring, the hinge will snap downwards as soon as it is loosened.

Step 6
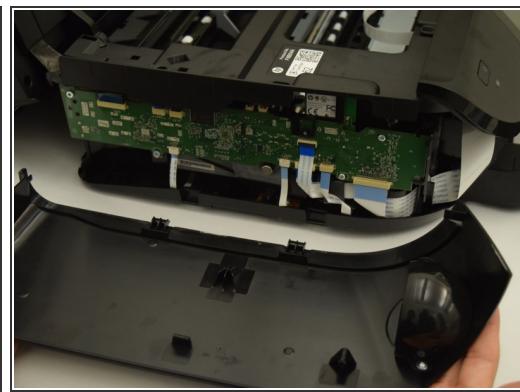

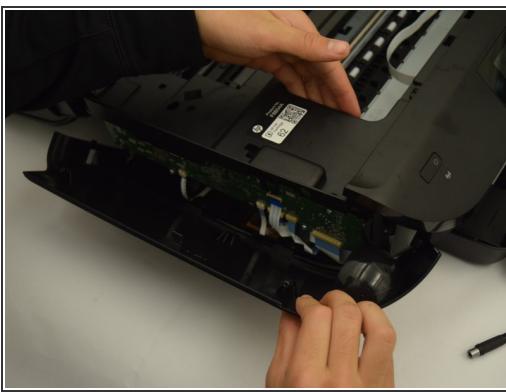

- Pull the plastic side cover off of the printer.

ⓘ You may need to lift the printer and push the cover downwards as it is latched onto the bottom of the printer.

ⓘ Plastic opening tools or a metal spudger may also be used.

Step 7
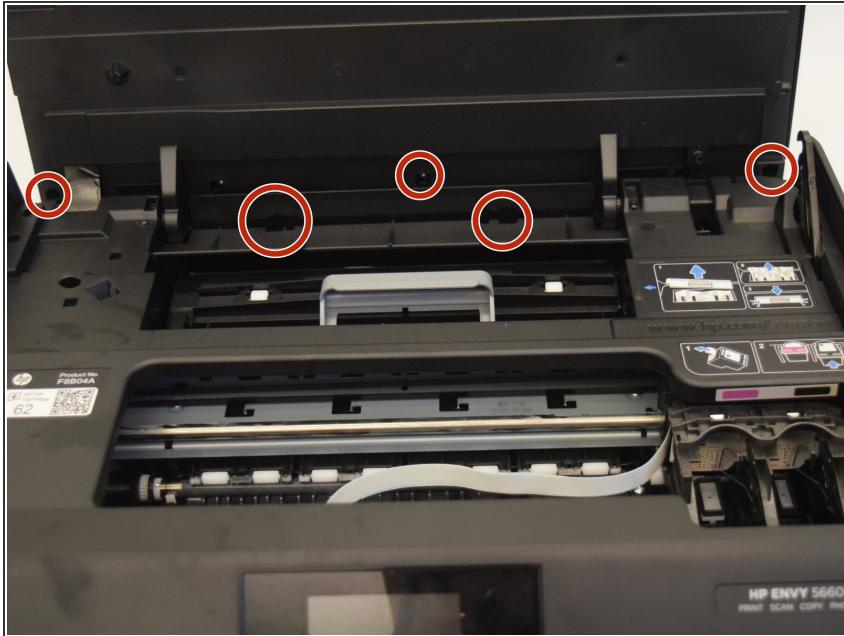

- Remove the five 11.5 mm screws located at the bottom of the scanner.

- (i) Steps 3-6 were intended to create easier access to these screws. However, they will still be difficult to reach.

- The top of the scanner will now easily pull off.

Step 8
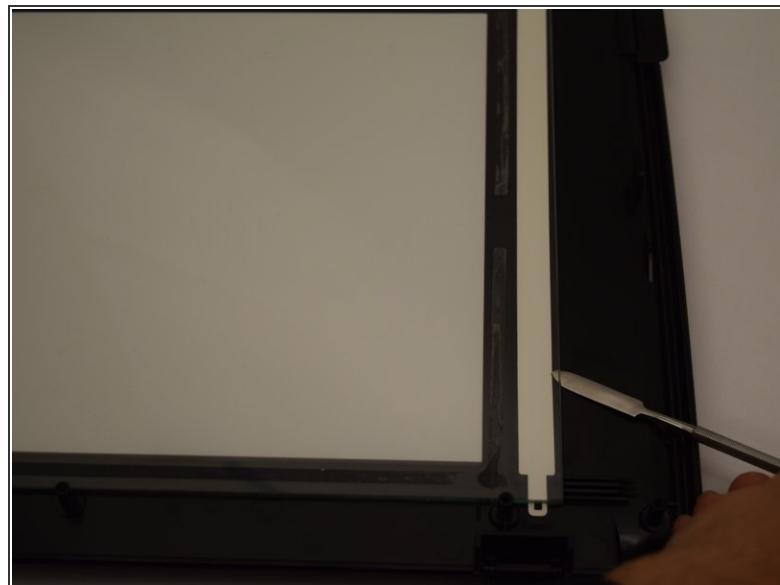

- Pry the old scanning glass up with a metal spudger.

- ⚠ There are adhesives under the scanning glass. Be careful not to break the glass while removing it.
