INTRODUCTION

Removing and replacing the touch screen is an easy fix for a broken, scratched, or smudged touch screen that might have dead pixels as well.

TOOLS:

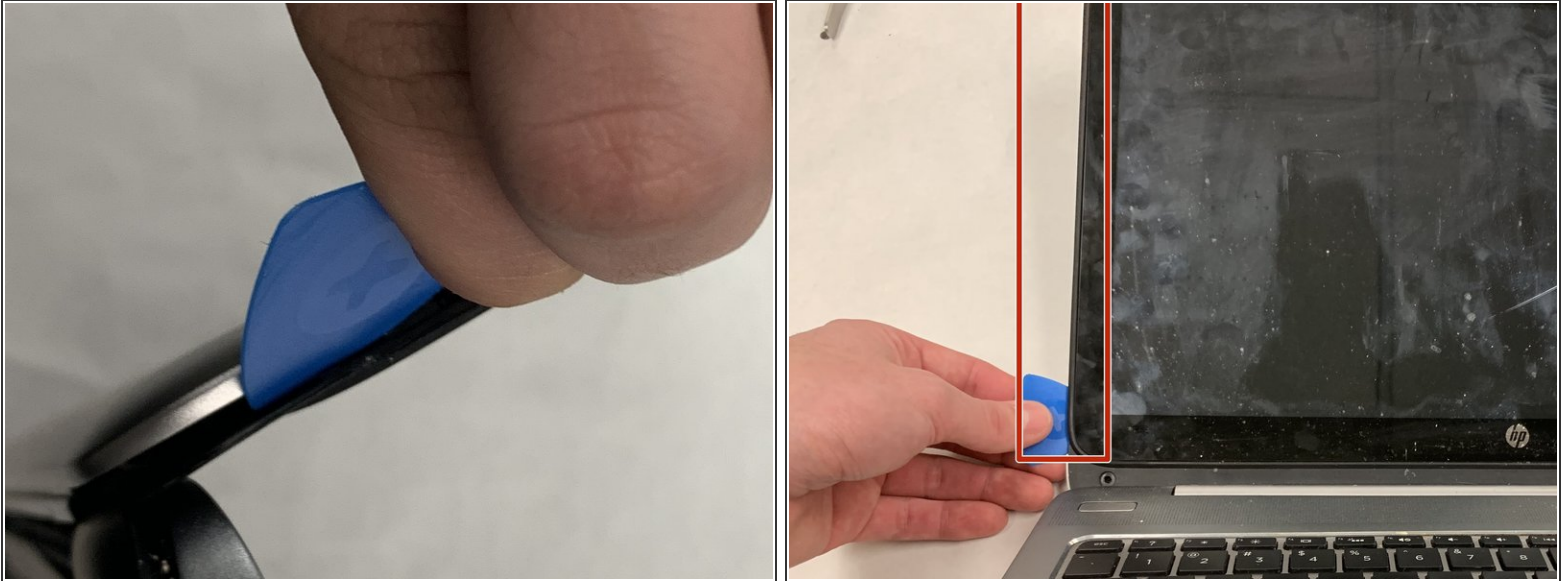

- [iFixit Opening Picks set of 6](#) (1)
 - [JIS #0 Screwdriver](#) (1)
-

Step 1 — Touch Screen

- Open the laptop.
- Remove black tabs at bottom left and right corners and remove the two M2.5x2.5 screws behind the black tabs with the J0 screwdriver.

Step 2

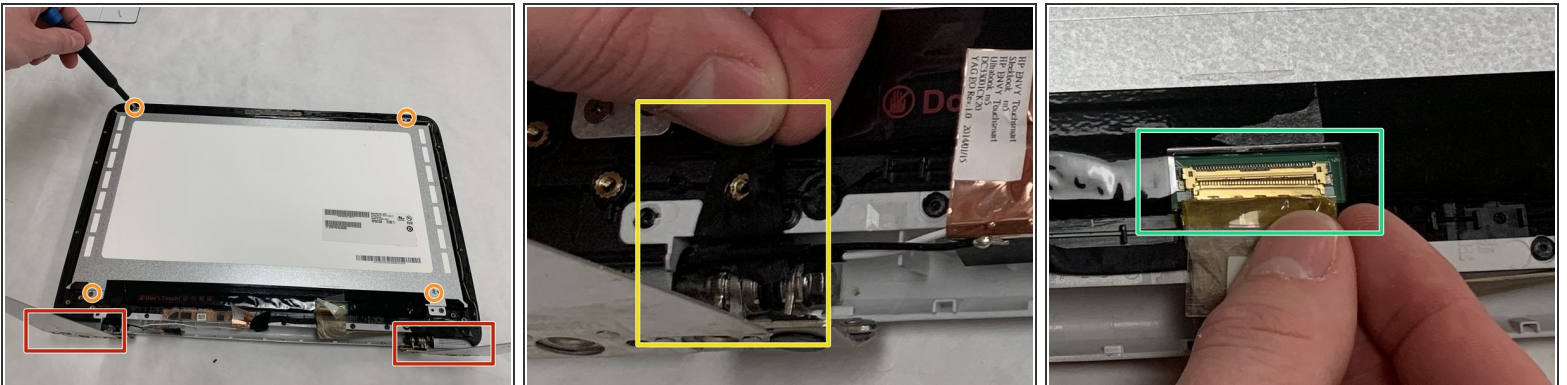

- Insert pick between the black plastic screen panel and the silver plastic exterior case on the side of the device.
- Slide pick around the border of the screen panel while keeping the pick between the mentioned panel and exterior case.
- ⓘ Repeat previous two steps until exterior case is removed. Pry with minimal force if necessary.

Step 3

- Remove the front panel from the rest of the device and set it aside.
- Remove the ten M2.5x2.5 screws with the J0 screwdriver.
- Remove the eight M2.0x2.0 screws with the J0 screwdriver.

Step 4

- Flip hinges down and away from the rest of the panel.
- Remove the four M2.5x2.5 screws with the J0 screwdriver.
- Move 4 pieces of black tape across the bottom of the panel and any other accessory tape.
- Disconnect the display cable connector that is located at the bottom right of the panel by pulling lightly.

Step 5

- Slowly lift the screen away from the touch screen front panel to remove.

To reassemble your device, follow these instructions in reverse order.
