Step 1 — Power Button

- Turn the printer so that the front is facing to your left.

- Flip the printer so that it is laying with its left side facing down and the bottom facing you.

Step 2

- Use a #2 Phillips head screwdriver to unscrew the 8mm screw on the top edge of the printer.

Step 3

- (i) There are three tabs along the back right corner of the printer underneath the panel (location is displayed in the second picture).

- Use a flathead screwdriver to depress the tabs while lightly pulling the panel towards you.

- Begin with the upmost tab and move your way down, individually depressing the tabs.

- Pull the panel towards you and remove it from the printer.

Step 4

- Turn the printer so that you are facing the open side with the power button chord.

- Carefully remove this cord.

Step 5

- There is a cover that protects the electronics within the power button.

- Remove it by pinching the two tabs on the cover.

- Pull it outward from the printer.

Step 6

- ⓘ A tension spring in the form of a bent wire is used to hold the assembly in the printer.

- In order to remove the spring completely, begin by removing the right end of the wire from it's slot above the power button with a metal spudger.
Step 7

- Unclip the left side of the wire from printer by applying upwards pressure along the edge of the wire.

- ⓘ This step can be done with either your fingers or a prying tool of your choosing.

Step 8

- Grab the wire and hold it firmly with two fingers.

- Pull it directly upwards.

- Wiggle it until it is fully removed from the printer.
