Step 1 — Battery
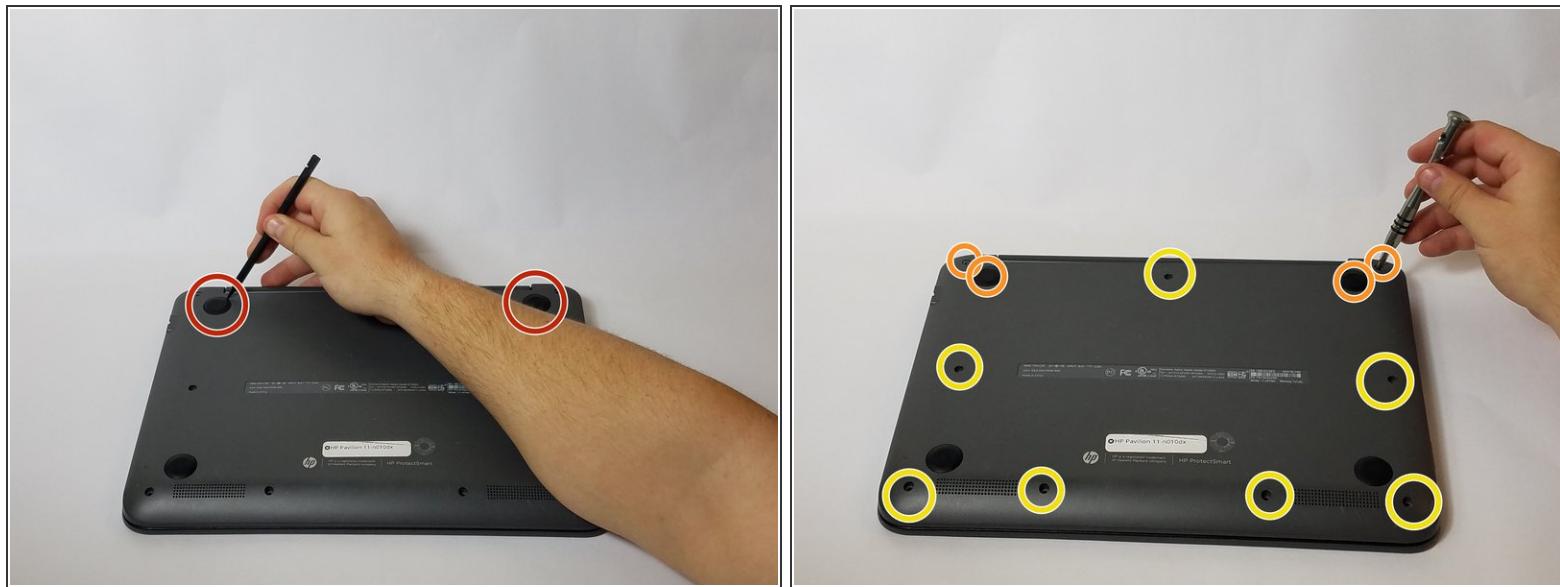

- Use the nylon spudger to remove the rubber pads near the hinge of the screen, then remove the screws under the pads.

- Use the Phillips #0 to remove four 9mm screws.

- Use the Phillips #0 to remove seven 6mm screws.

Step 2

- Use the nylon spudger to pry the back casing near the hinges for the screen.

- Continue to pry along the edge of the back case until the back is ready to be removed.

- ⚠ Careful when beginning to remove the case. There is a cable attached between the bottom case and the motherboard that must be properly disconnected.

Step 3
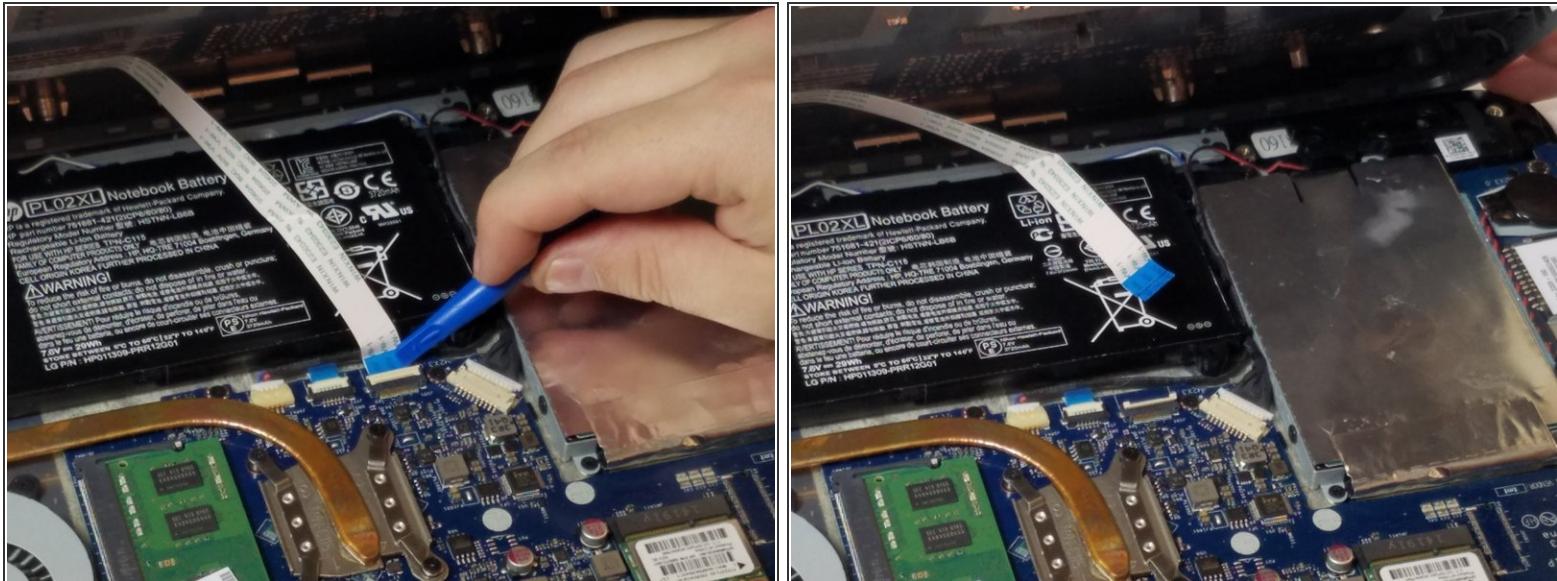

- Use the blue plastic opening tool to lift up on the white tab that is holding the cable in place on the motherboard.

- Now carefully pull the cable out of place and remove the entire back casing.

Step 4
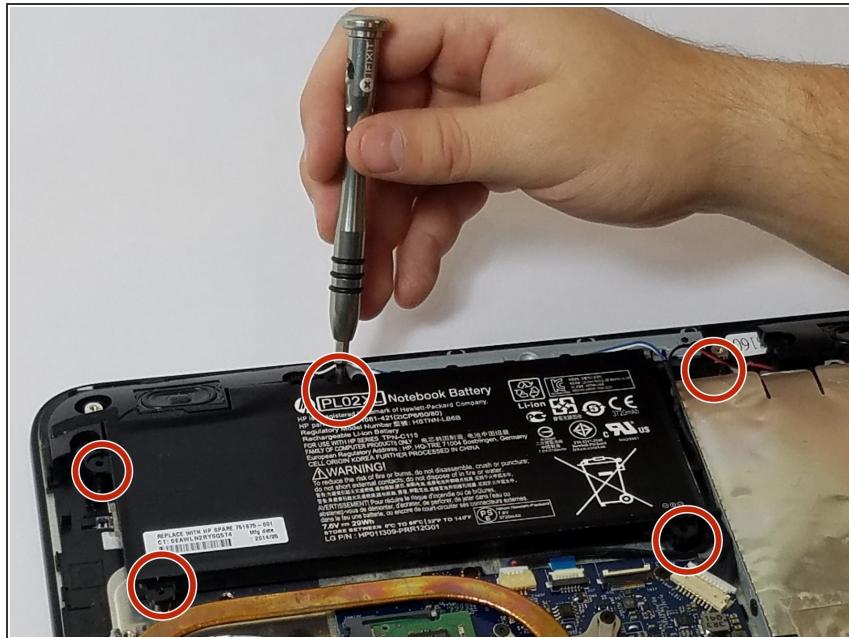

- Remove the five 6mm screws that hold the battery in place using the Phillips #0.

Step 5
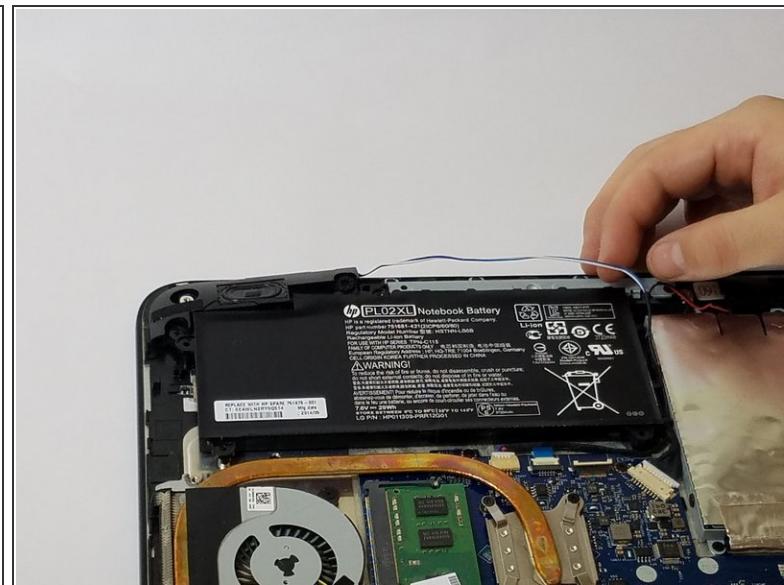

- Use the nylon spudger to pry away the blue/white wire that is positioned near your battery.

Step 6
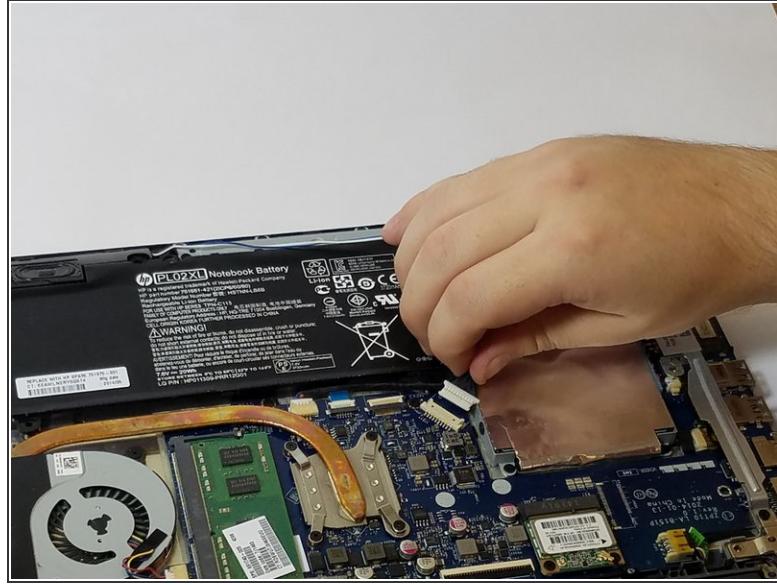

- Disconnect the battery cable from the motherboard by carefully pulling on the black wire at the point closest to the white tab.

Step 7
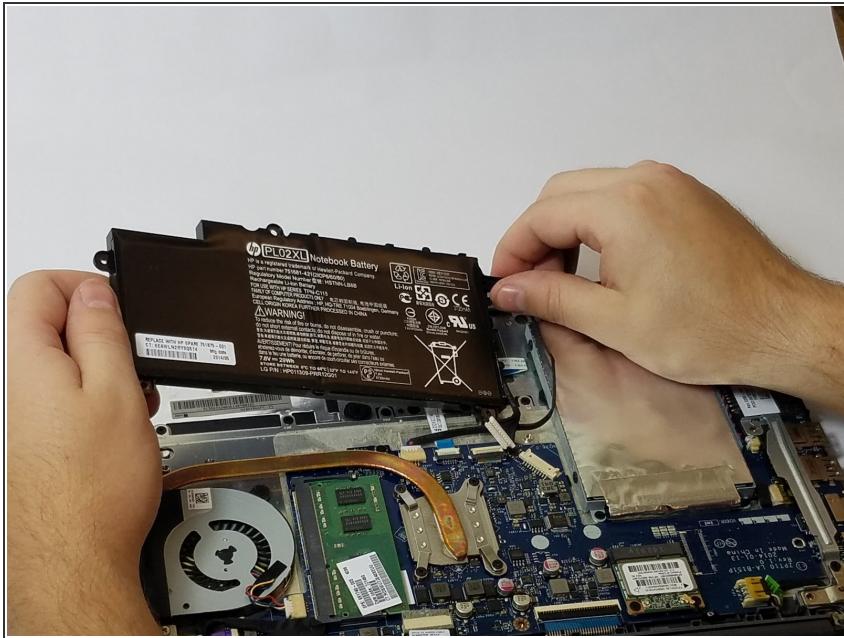

- Remove the battery from your device.

To reassemble your device, follow these instructions in reverse order.
