

# HP Pavilion Model H8-1202 RAM Replacement

This guide will show how to replace the RAM of an HP Pavilion computer.

Written By: TEMET

---

## INTRODUCTION

This guide will give a step-by-step process of how to remove used RAM sticks in an HP Pavilion Model H8-1202 and replace them with new RAM sticks. The computer should not be powered and should be unplugged to safely follow this guide.

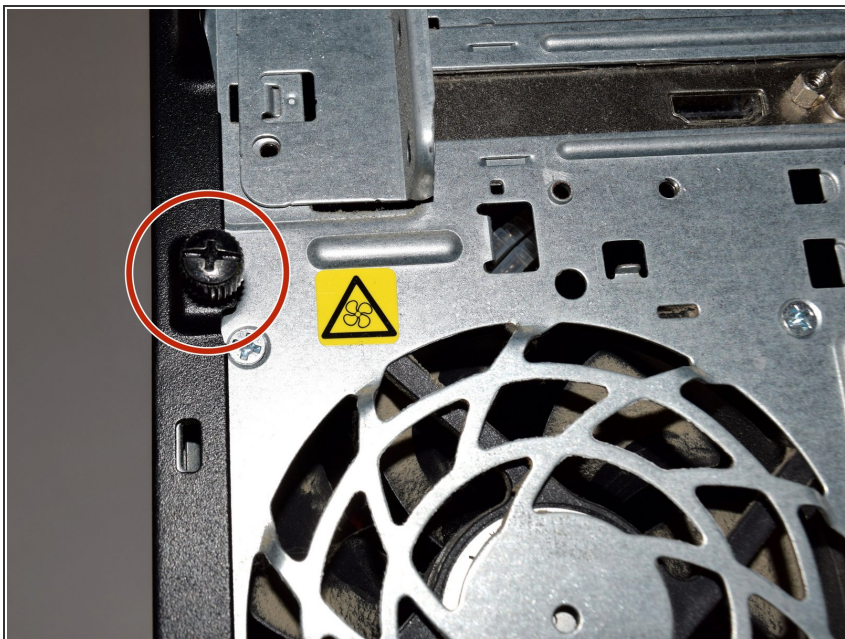

### TOOLS:

- [Anti-Static Wrist Strap](#) (1)
-

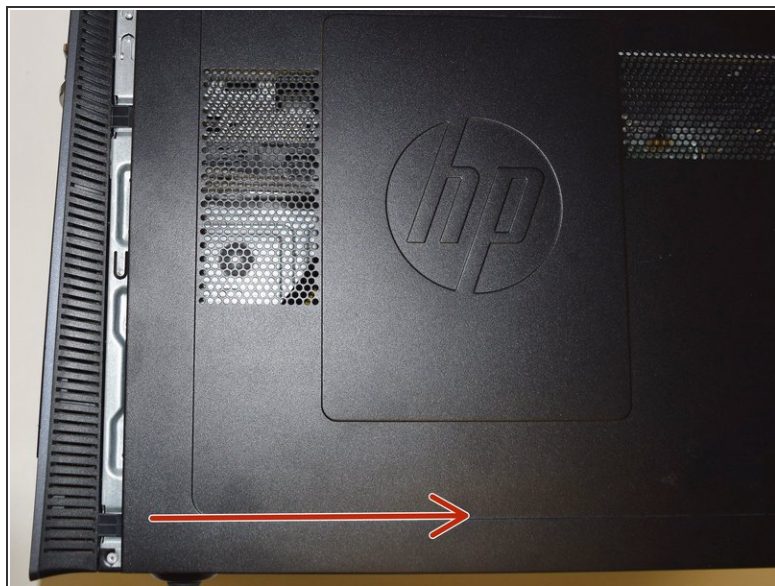

## Step 1 — Opening case

- Locate thumbscrew on the back of the computer case.
- ⓘ The thumbscrew does not require a screwdriver and can be unscrewed by hand.

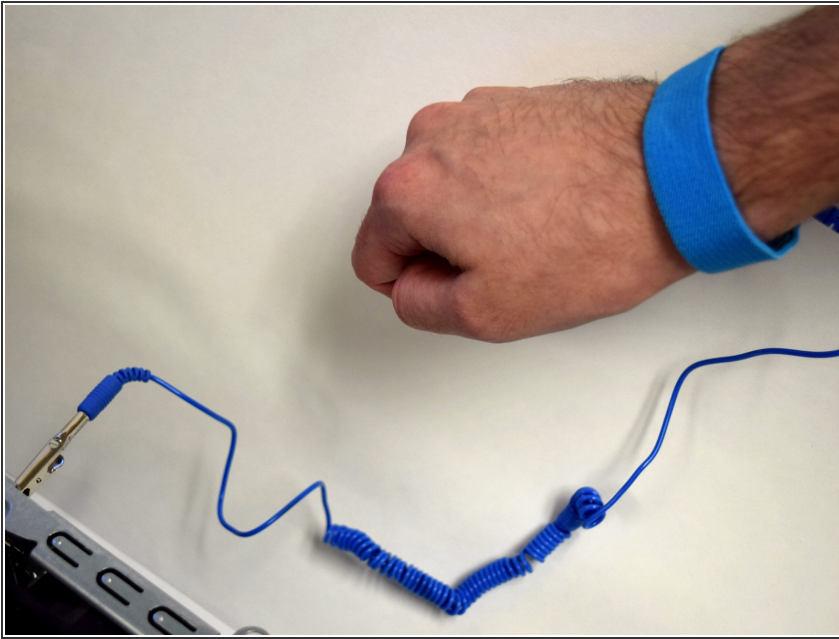

## Step 2 — Opening case

- Safely place the computer down on its side and slide the panel off the case.

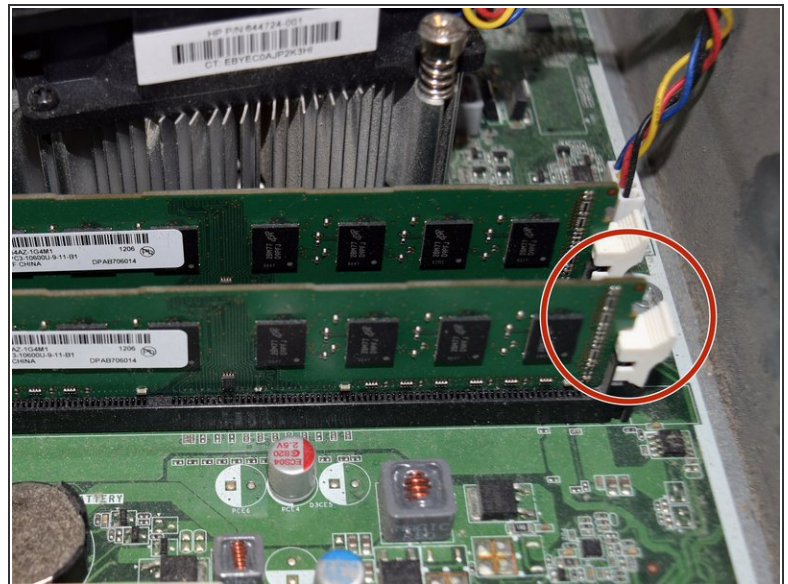

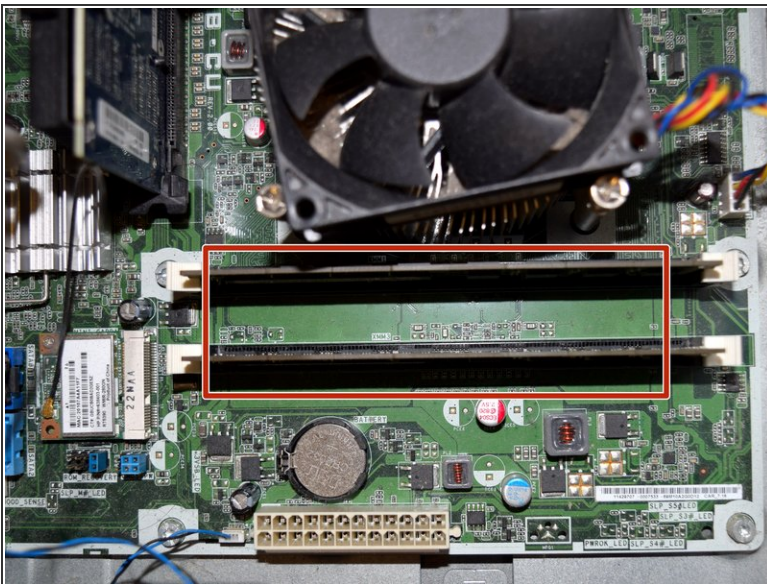

### Step 3 — Safety notice

 Due to the potential of painful electric shocks, an anti-static wristband clipped to an unpainted piece of metal on the computer case is highly suggested.

### Step 4 — Finding RAM

- Clear aside internal wires and locate RAM sticks secured by clips.

## Step 5 — Removing RAM

- Push out securing clips and remove used RAM sticks.

## Step 6 — Replacing RAM

- Set aside used RAM sticks and replace them with new RAM sticks. Push clips back in to secure new RAM sticks.
- ⓘ RAM sticks should audibly "snap" into place if placed correctly.

To reassemble your device, follow these instructions in reverse order.
