INTRODUCTION

The RAM of your computer is integral to normal functioning. If your computer crashes or is often slow, you may want to upgrade or replace your memory. There are no cords or cables connecting the memory to the computer, only the slot it sits in. Accessing and removing the memory is simple.

TOOLS:

- Phillips #00 Screwdriver (1)

Step 5

- Unscrew the three 2x5mm screws with a #00 Phillips screwdriver.

Step 6
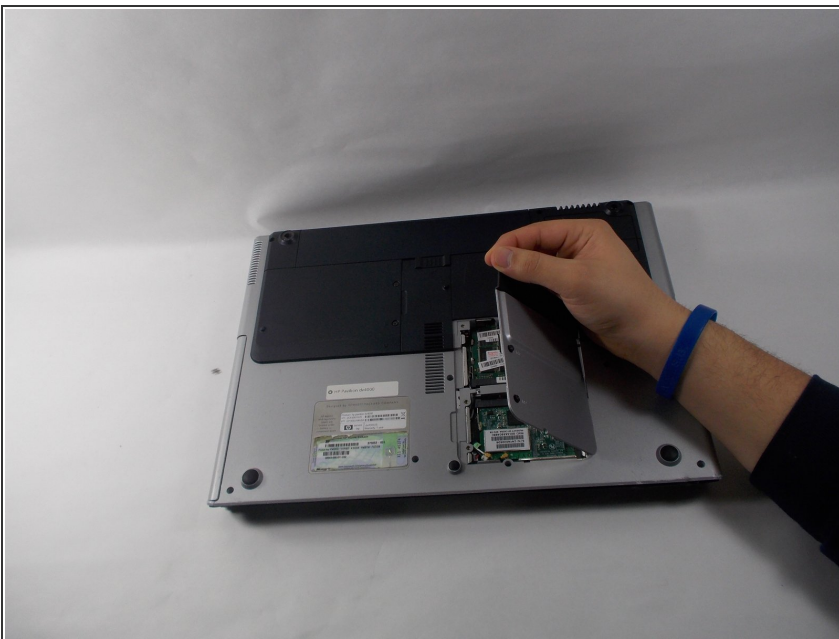

- Remove the memory cover.

Step 7

- Pull the two tabs on both sides of the memory stick to release it.

- (i) The memory should pop up on its own with very little force applied to the tabs.

Step 8

- Grab the memory stick from the sides with your fingers and set aside.

To reassemble your device, follow these instructions in reverse order.
