Step 5
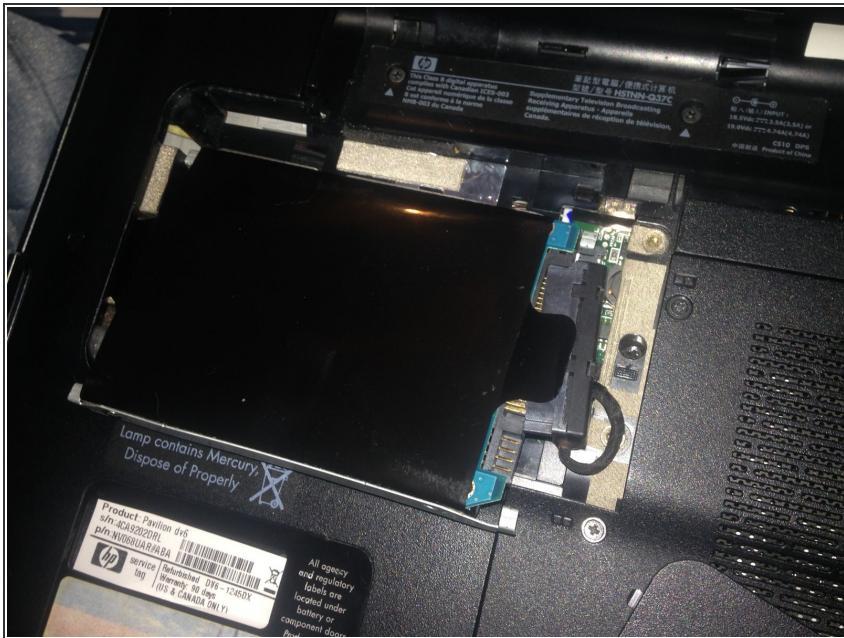

- Remove the SATA cable from the hard drive, then remove the hard drive.

Step 6

- Remove the screws from the hard drive enclosure.

Step 7
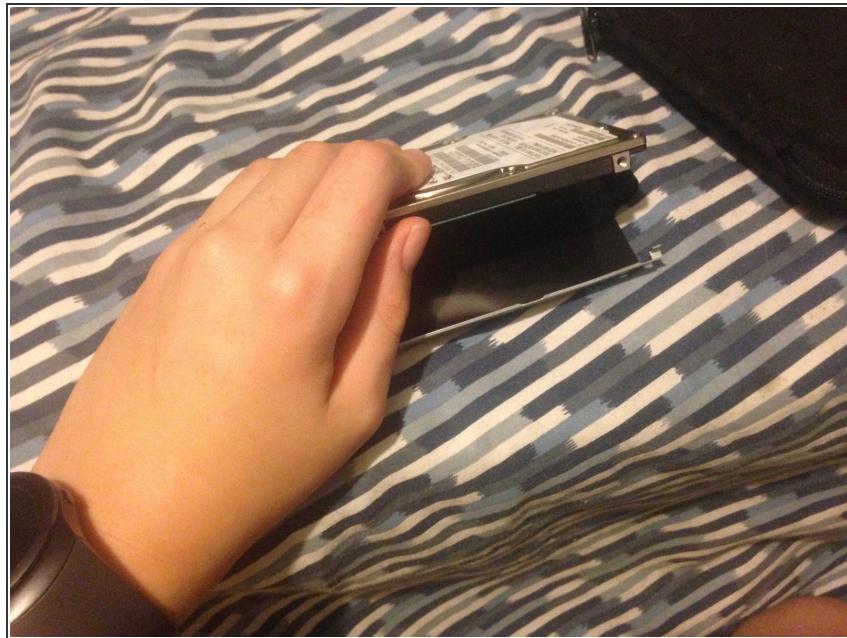

● Remove the Hard Drive from the enclosure

Step 8

● Insert the new hard drive in enclosure.

Step 9
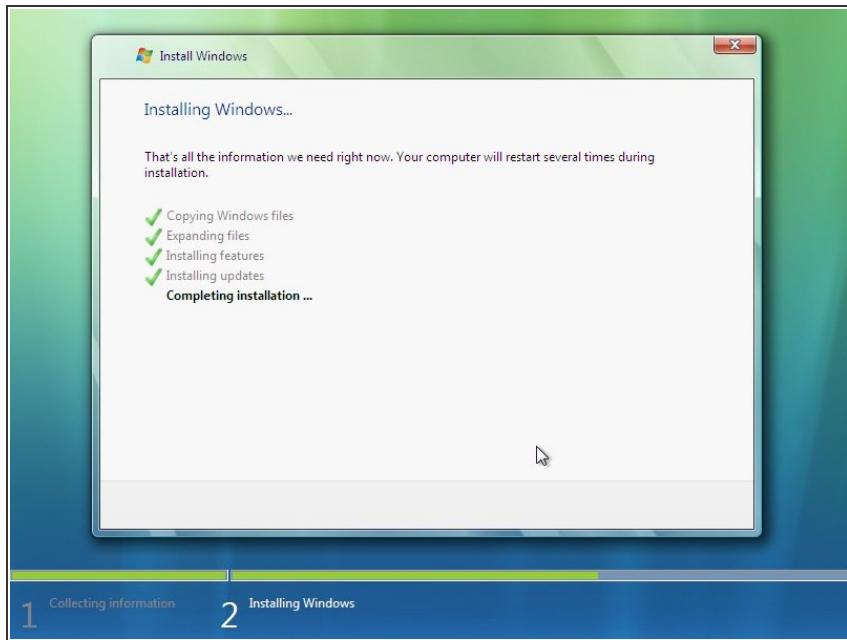

- Install an OS on the hard drive.

- (i) For this system, Windows is recommended.

- ⚠ Do not install a version of Windows that is not supported if this system is going to be connected to the internet, use a supported version, such as 8.1 or 10.

To reassemble your device, follow these instructions in reverse order.
