INTRODUCTION

To detach the memory you will need a Phillips PH1 screwdriver. Also remember to be gentle with the screws because not all of them will completely detach from the plastic.
🔧 TOOLS:

- Phillips #1 Screwdriver (1)

Step 1 — Battery

- Shut down the computer.

  ⚠️ Shutting down the computer by holding power button can cause damage to computer.

- Turn computer upside down so the base is facing upward.
Step 2

- Slide latch next to battery icon until battery pops up.

- Pull the battery away from the computer until completely detached.

Step 3 — Memory Card

- Loosen two 5mm Phillips #1 screws securing plastic cover, until cover is detachable.

- Slide cover toward empty battery area and remove it.

Step 4

- Lift black cover overlaying memory chip.

- Spread the tabs on each side of the memory slot to release the module.

- Remove memory by pulling the memory out at an angle, until completely detached.

To reassemble your device, follow these instructions in reverse order.
