Step 1 — Top Panel

📌 Before disassembling your printer, be sure that the printer has been unplugged.

● Rotate the printer 90 degrees counter clockwise so that the side panel next to control panel is facing you.

● Remove the two T10 12mm Torx screws from the left side panel.

Step 4

- Rotate the printer 90 degrees clockwise.

- Remove the two T10 12 mm Torx screws.

- Grasp both sides of the side panel and pull it forward to remove the panel.

Step 5

- Rotate the printer 90 degrees counter clockwise.

- Lift the scanner lid to expose the scanner glass.

Step 6

- Remove the two T10 12 mm Torx screws.

⚠ Do not attempt to lift the top panel off the printer yet because it is still connected to the printer body by a cable.
Step 7

- Rotate the printer 90 degrees counter clockwise.

- Inside the printer is a small white tab. Press it inward with a spudger until a pop is heard.

- Remove the front panel by grasping its front and pulling away from the printer.

Step 8

- Rotate the printer 90 degrees clockwise.

- Remove the cable connecting the top panel of the printer to the power button assembly.
Step 9

- Carefully lift the top panel of the printer away from the printer body.

Step 10 — Control Panel Circuitry

- Set aside the printer body.

- Remove the three T10 12 mm Torx screws from the back of control panel circuit board.

Step 11

- Using both hands, carefully lift the control panel circuit board from the top panel of the printer.

To reassemble your device, follow these instructions in reverse order.
