INTRODUCTION

This will teach you the easiest way I found to remove and replace the WiFi NIC in the ProBook 4530s.

⚒ TOOLS:

- Spudger (1)
- Phillips #0 Screwdriver (1)

This document was generated on 2019-09-22 10:13:26 PM (MST).

Step 1 — Introduction

- Start by flipping over the laptop onto its back.

Step 2 — Battery Removal

- Push both switches inward. The battery should pop out a slight amount.
- Pull out the battery.

Step 3 — Back Panel Removal

- Press on both of the battery switches then push on the back panel forward.

- It should pop out slightly.
- Lift and slide the panel off.

Step 4 — Connector Removal

- Locate the WiFi card outlined in red.

- The golden connectors will need to be popped off. They are marked in blue.

⚠️ Be very careful. If these connectors break, you will have to buy entirely new wires and connectors.

- Use a nail, a flat-head screwdriver, anything that will be able to pop off the connector gently.

Step 5 — Card Removal

- Remove the two screws that secure the card down.

- The card should pop up at a 45 degree angle.

- Pull the card straight out.

To reassemble your device, follow these instructions in reverse order.
