# INTRODUCTION

This guide will help you replace the optical drive, otherwise known as the CD drive. Be sure that no disks are within the drive before replacing the drive.

## TOOLS:

- Phillips #0 Screwdriver (1)

## Step 1 — Battery

⚠️ Make sure the computer is shut off and the power cord is unplugged from the AC outlet.

● Slide the two release latches on either side of the battery.

● Gently tilt the battery upward and remove it from its socket.
## Step 2 — Bottom Door

● Turn the computer so the bottom is facing towards you.

● Remove the one 3.0 mm Phillips PM2.0x3.0 security screw.

ⓘ The security screw is an optional feature and isn't required to hold the backing if there is not one screwed in place.

● Slide the release latches then pull the door towards you. Lift the door away to completely remove it.

## Step 3 — Optical/CD Drive

- Remove one 6.0 mm Phillips PM2.5x6.0 screw that is securing the optical drive.

## Step 4

- Press the optical drive tab to release the drive component.
- Gently pull and remove the component from the computer.
