

# Hamilton Beach Food Processor 70740

## Motor/Cord Replacement

Prerequisite Only

Written By: David Gedeon

## INTRODUCTION

This procedure requires a moderate level of electrical wiring experience, and a few listed tools.

### TOOLS:

- [Spudger \(1\)](#)
- [64 Bit Driver Kit \(1\)](#)
- [Metal Spudger \(1\)](#)

### PARTS:

- [Hamilton Beach 70740 Motor \(1\)](#)

## Step 1 — Base Removal

- Hold the food processor upside down and remove the two screws indicated with a screwdriver. Once unscrewed, remove the two rubber suction pads.

## Step 2

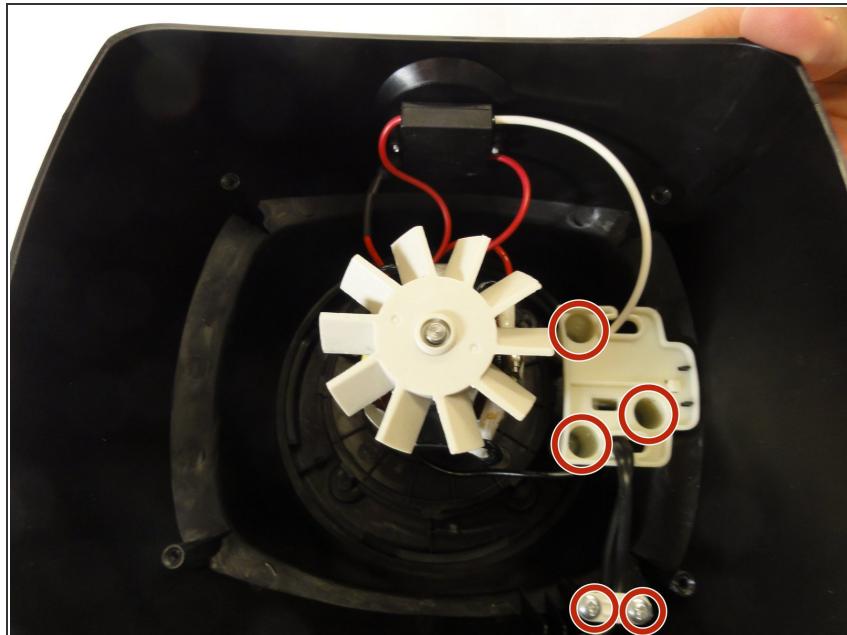

- Use a spudger to remove the 4 rubber base pads located at the corners of the device.

## Step 3

- Unscrew all 4 screws that are located beneath the pads with a screwdriver and remove the plastic grey base.

## Step 4

- Remove the screws indicated with a screw driver.

## Step 5

- Remove the two screws behind the knob with a screwdriver.

## Step 6 — Motor/Cord

- Use a regular nylon spudger to remove the plastic caps at these locations with moderate pressure.

**⚠** When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The regular black nylon spudger or a plastic opening tool should be used whenever possible.

**⚠** Apply pressure at the edge of the plastic cap circles. Apply stress elsewhere may damage the device.

**ⓘ** Note that the plastic caps are glued

## Step 7

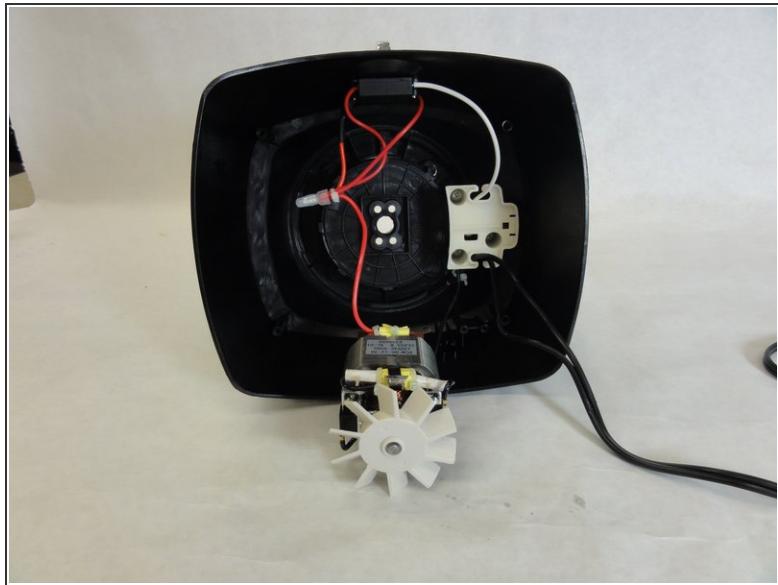

- Remove the 4 screws located under the plastic caps with a screw driver.

## Step 8

- Lift and remove the plastic gears at the center of the device.
- Remove any grease residue underneath the plastic gears.

## Step 9

- Remove the remaining screws to unhinge the motor located at the center of the device using a screw driver.

To reassemble your device, follow these instructions in reverse order.
