Step 3

- Unlatch the lock on the top right of your laptop first.

- You will need to pull on the lock on the left side and remove the battery at the same time

- The left lock is a spring lock and needs constant pressure applied in order to stay open.

Step 4 — RAM
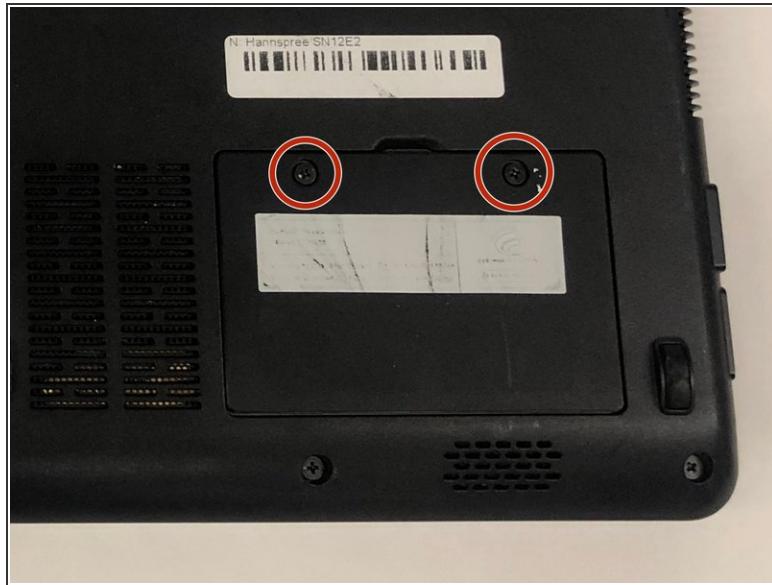

- Remove the RAM access door.

- Remove the two 3mm screws using a Phillips #0 screwdriver.

- Gently lift on the door out of place.

- (i) When replacing the door it should click into place. Ensure the alignment tabs are correctly seated and gently push until it clicks into place.

Step 5

- Gently push outward on the two retaining clips, being careful not to damage the motherboard.

- Lift up on the RAM until it makes a 35 degree angle with the board.

- Remove the RAM by pulling away from the housing at 35 degrees.

To reassemble your device, follow these instructions in reverse order.
