## INTRODUCTION

If your Invoke is experiencing problems with powering on after being plugged in, there could be an issue with a weak or broken power port.

### TOOLS:

- [T10 Torx Screwdriver](#) (1)
- [Metal Spudger](#) (1)

## Step 1 — Power Port

- Use a metal spudger to remove rubber bottom.

## Step 2

- Use a #10 Torx screwdriver to remove four 14 mm screws.

## Step 3

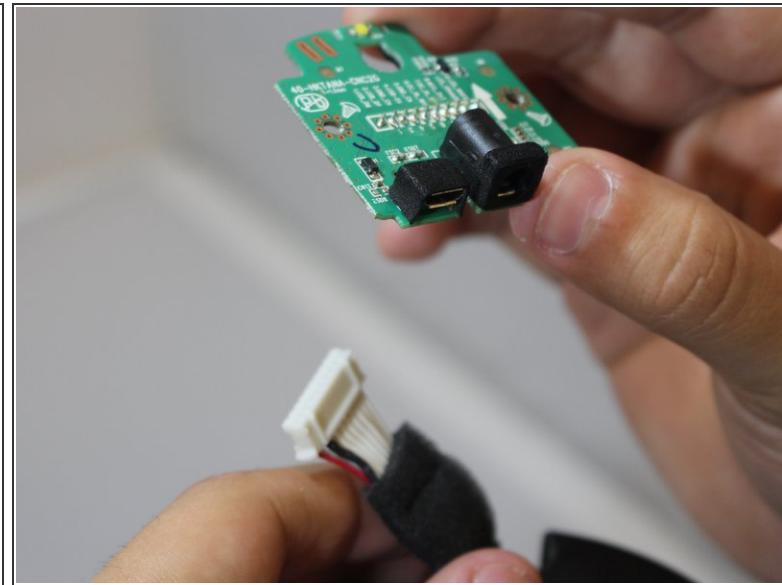

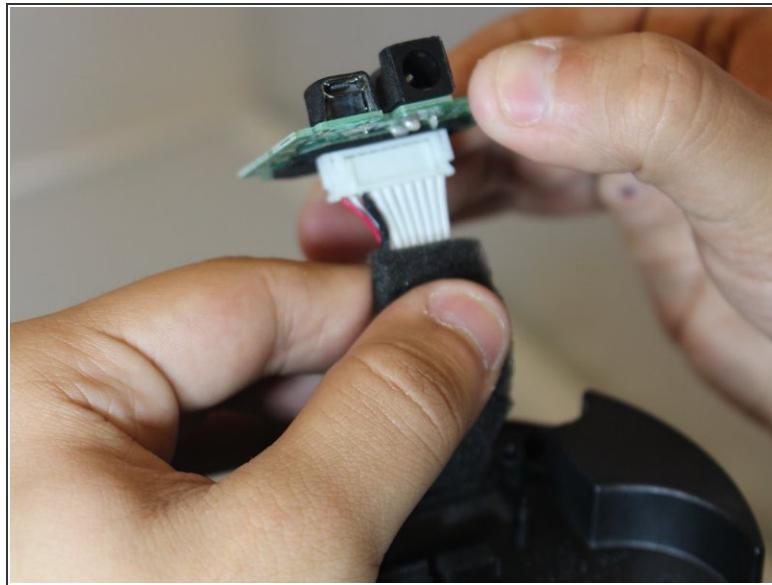

- Firm grip the bottom and wiggle upwards to remove bottom.

## Step 4

- Use a #10 Torx screwdriver to remove two 10 mm screws from board attached to ports.
- Pull board up lightly.

## Step 5

- Pull cable to disconnect board from device.
- ⓘ For replacement of service port, you will have to replace whole board that the port is attached to.

To reassemble your device, follow these instructions in reverse order.
