

# Honda FC600 Tiller Throttle Cable Replacement

Replace a worn or damaged throttle cable on the Honda FC600 tiller.

Written By: Craig Lloyd

## INTRODUCTION

Follow this guide to replace a worn or damaged throttle cable on the Honda FC600 tiller.

### TOOLS:

- Phillips #2 Screwdriver (1)
- Flat Needle Nose Pliers (1)
- 10mm Socket (1)
- Socket Wrench (1)
- Snap Ring Pliers (1)
- Flathead Screwdriver (1)

### PARTS:

- Honda Cable, Throttle 17910-733-013 (1)

## Step 1 — Remove the Spark Plug Cap

⚠ Before you begin, it's important that you completely cut power to the tiller by disconnecting the spark plug. This will prevent the engine from accidentally starting up while you're working on the tiller.

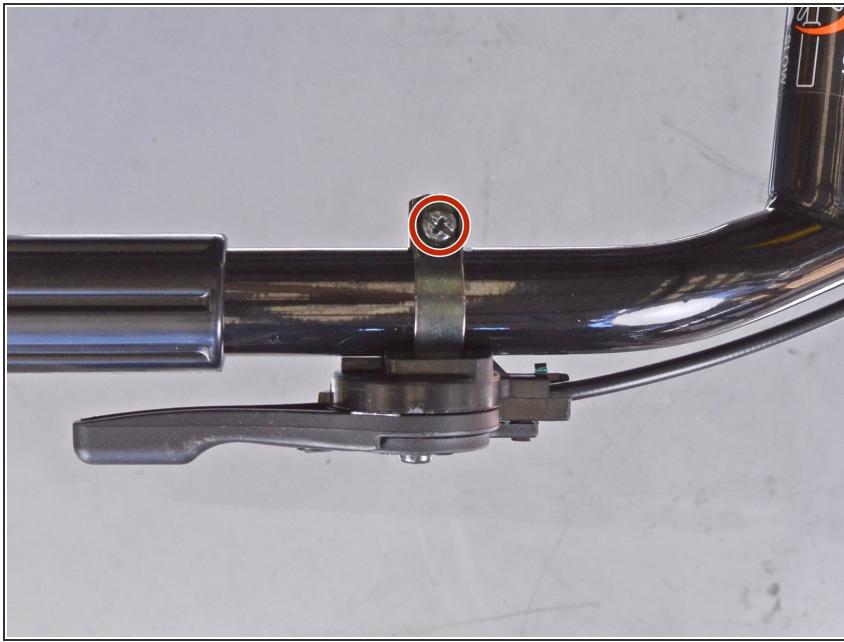

- Grab the spark plug cap and pull it straight out to disconnect the spark plug from the engine.

## Step 2 — Preparation

- Push the throttle lever all the way down.

## Step 3 — Remove the Throttle Lever

- Remove the 23 mm-long Phillips #2 screw securing the throttle lever to the handlebar.

*(i)* This screw is accompanied by a square nut. Make sure to retain it for re-assembly.

## Step 4 — Remove the Small Throttle Cable Clip

- Use a pair of needle-nose pliers to remove the small clip attached to the throttle cable.

## Step 5 — Remove the Throttle Cable

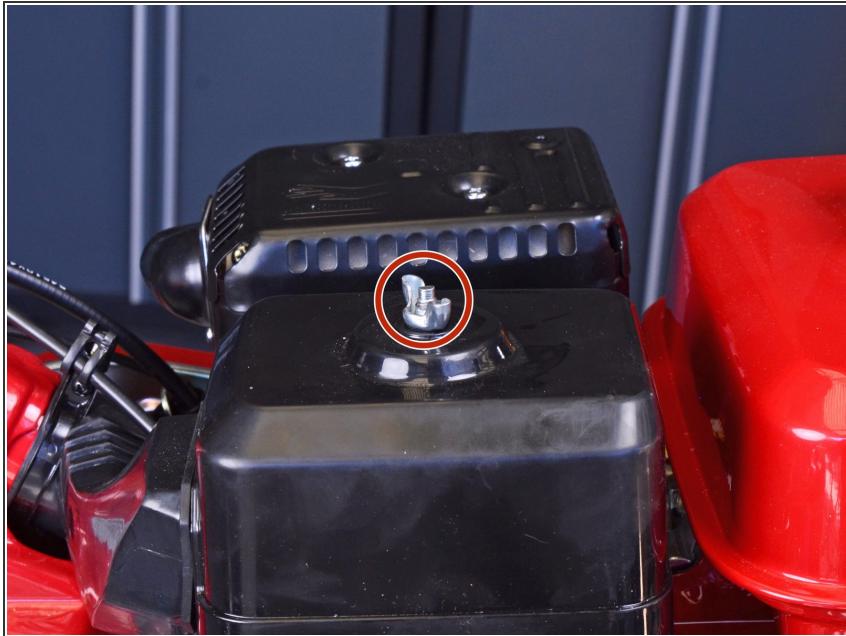

- Grab the open end of the throttle cable and pull it out of the throttle lever to free it from its recess.

## Step 6

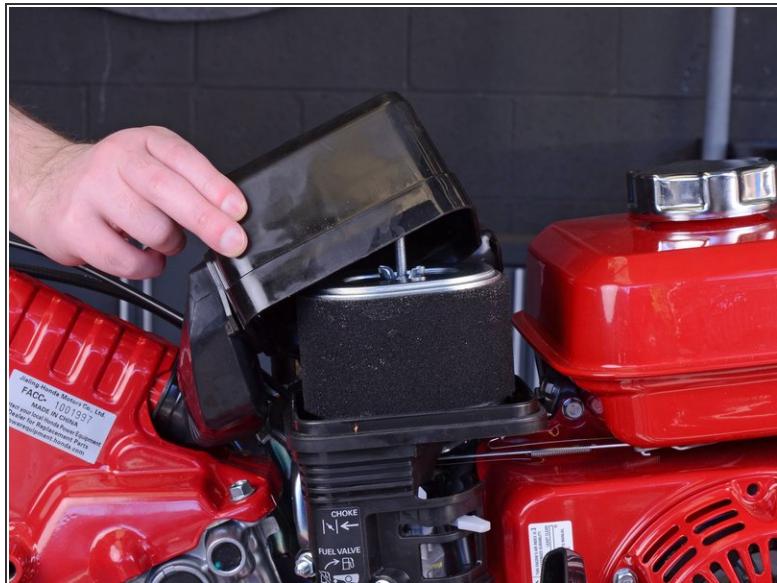

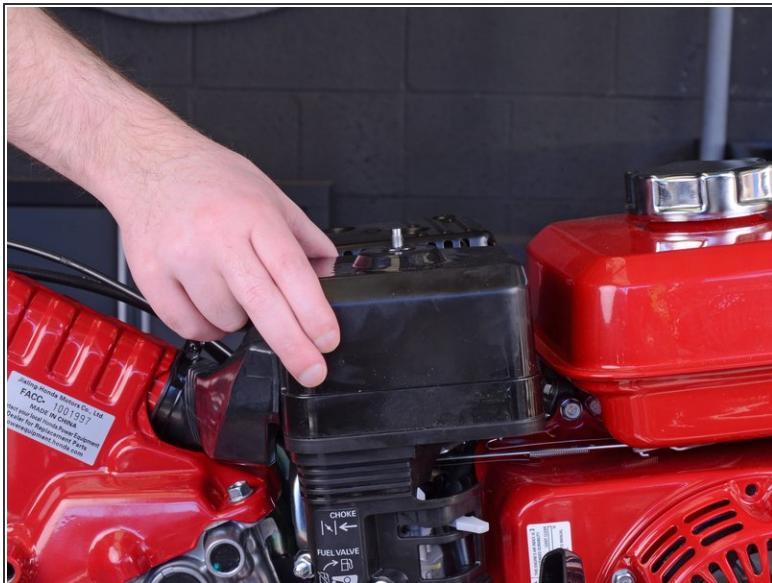

- Continue to lift the throttle cable out of the throttle lever, making sure it clears the openings in the recess.

## Step 7 — Remove the Air Filter Cover

- Use your fingers to unscrew and remove the wing nut securing the air filter cover to the air filter elbow.

## Step 8

- Lift up and remove the air filter cover to reveal the air filter.
- The air filter cover will still be attached to the tiller by a flexible hose. You can push the cover to the side while you continue to work on the tiller, or follow the next two steps to completely remove the cover.

## Step 9 — Detach the Air Filter Cover

*(i)* The next two steps are optional, but they will make it easier to work on the tiller from here on out.

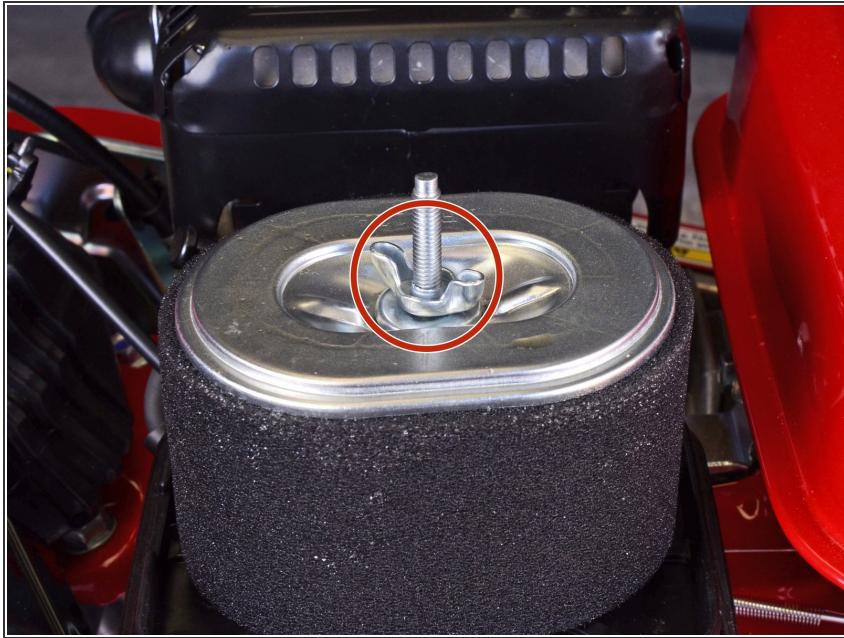

- Squeeze the metal clip on the inside of the air filter cover and remove it.

## Step 10

- Hold onto the air filter hose and pull on the air filter cover to remove it.

## Step 11 — Remove the Air Filter

- Use your fingers to unscrew and remove the wing nut securing the air filter to the air filter elbow.

## Step 12

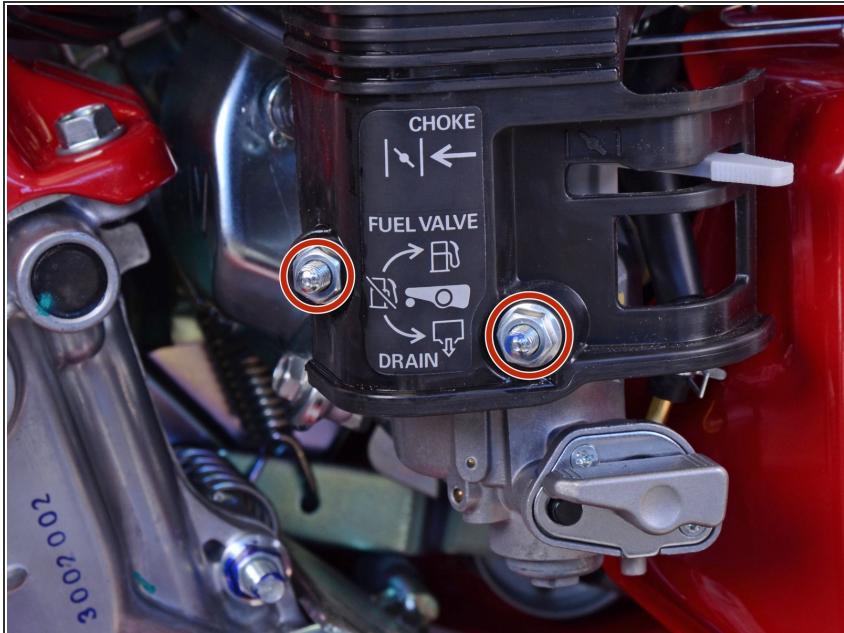

- Wear gloves or use a rag during this step, as the air filter is coated with oil.
- Lift the air filter straight up off the elbow, making sure it clears the threaded rod.

## Step 13 — Remove the Air Filter Elbow

- Use a 10mm socket and socket wrench to remove the 25.5 mm-long bolt securing the air filter elbow to the tiller.

## Step 14

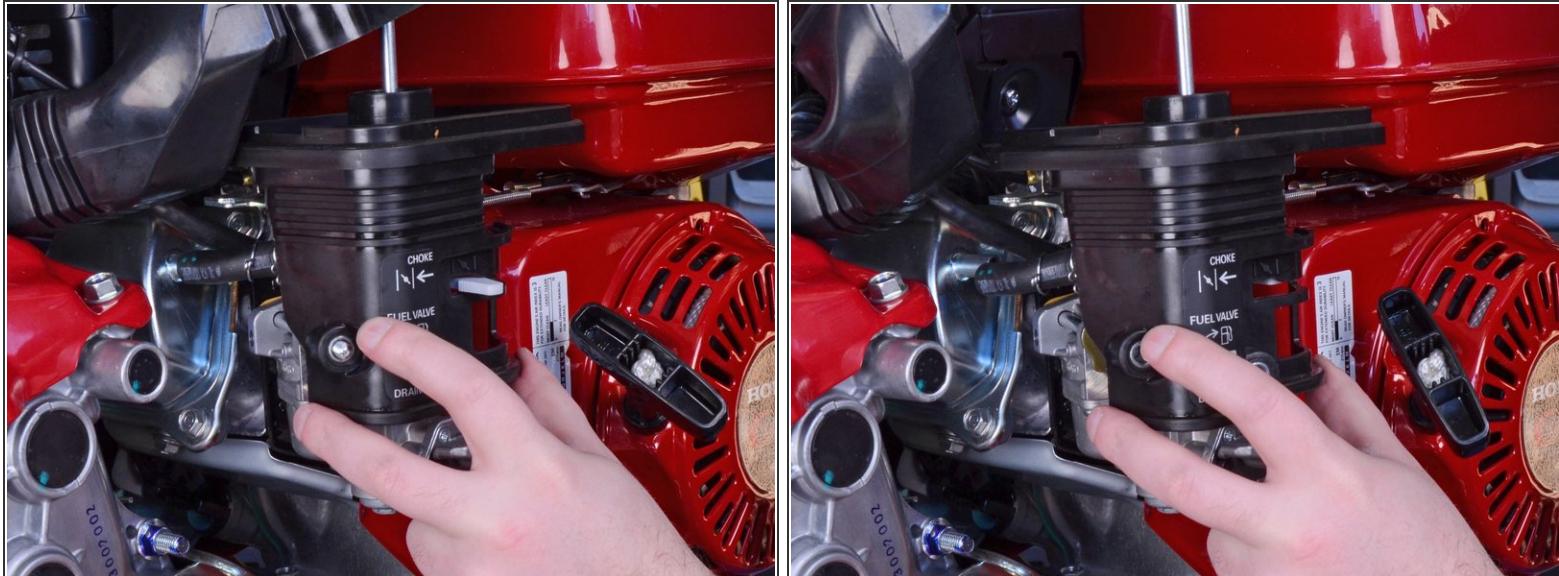

- Use a 10mm socket and socket wrench to remove the two nuts securing the air filter elbow to the carburetor's threaded rods.

## Step 15

- Use a pair of snap ring pliers to loosen the spring hose clamp on the breather tube, pulling it out 2-3 cm so it's not clamping onto the end of the tube.

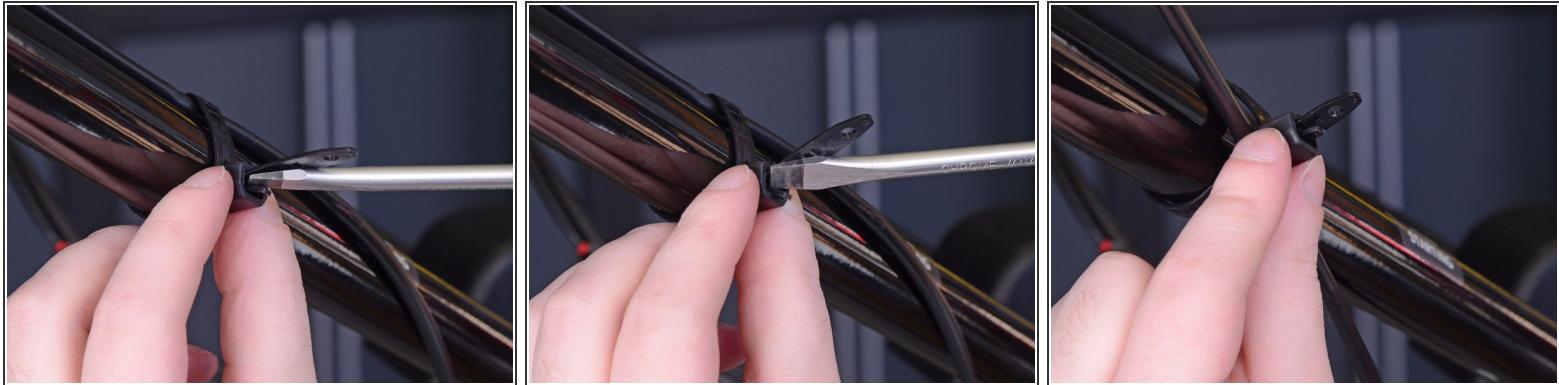

## Step 16

- Pull the air filter elbow straight off, making sure it clears the carburetor's threaded rods.

*(i)* As you remove the elbow, you may need to use your other hand to remove the breather tube from the engine's valve cover.

## Step 17 — Throttle Cable

- Insert a flathead screwdriver in between the release tab and the tip of the cable tie securing the throttle cable to the handlebar.
- Twist the screwdriver to separate the release tab and loosen the cable tie.

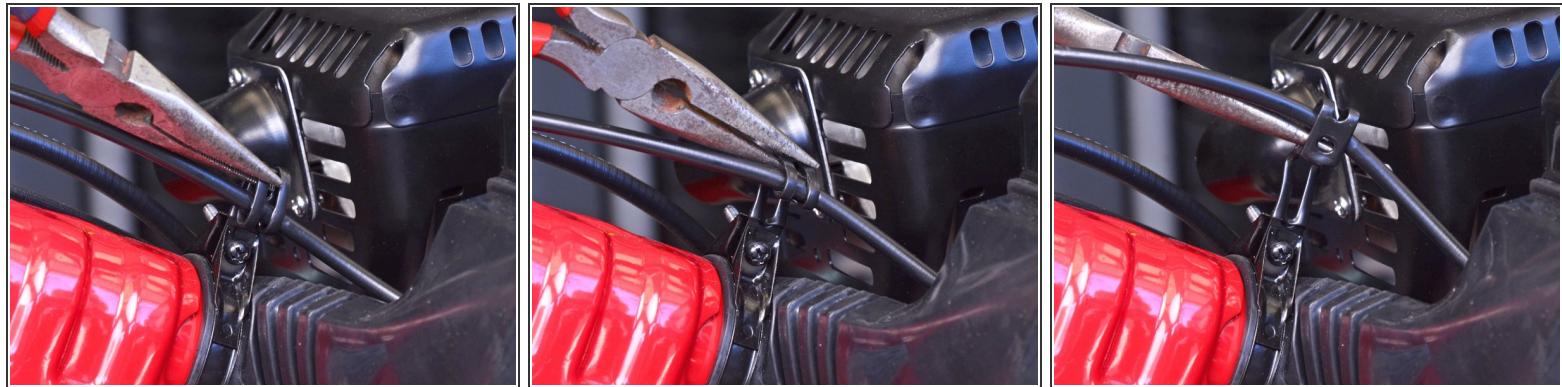

*(i)* Repeat this step for the remaining cable ties.

## Step 18

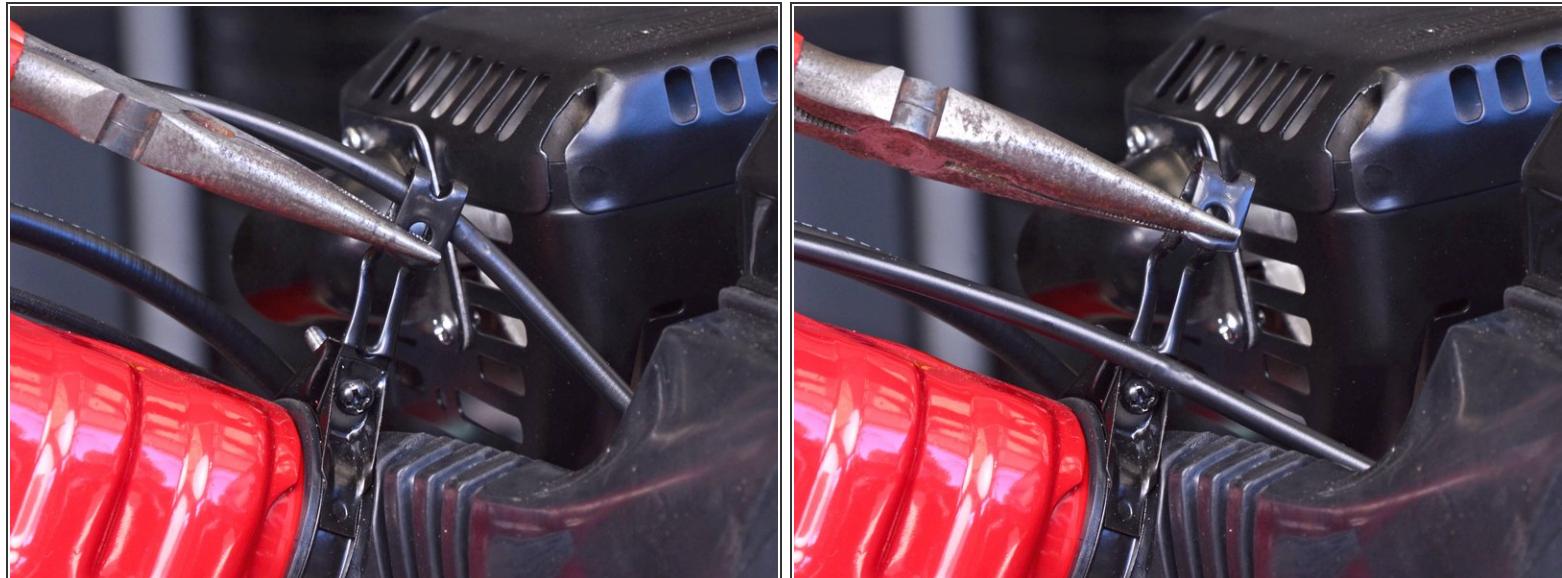

- Pull the throttle cable out of the cable holder underneath the handle column.

## Step 19

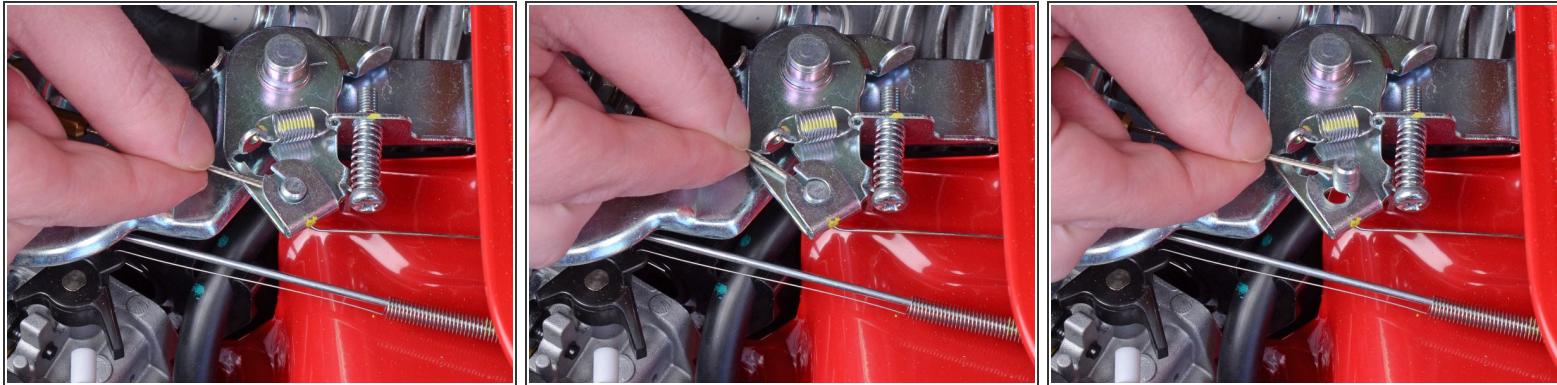

- Use a pair of needle nose pliers to bend the metal clip at the bottom of the handle column out and upward.

## Step 20

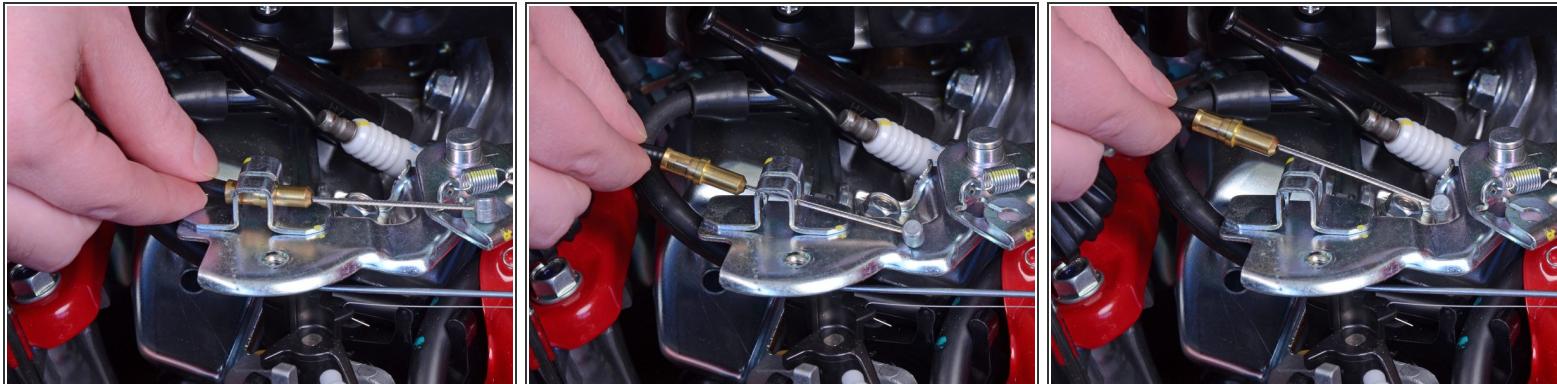

- Use a pair of needle nose pliers to bend the last section of the metal clip outward to release the throttle cable.

## Step 21

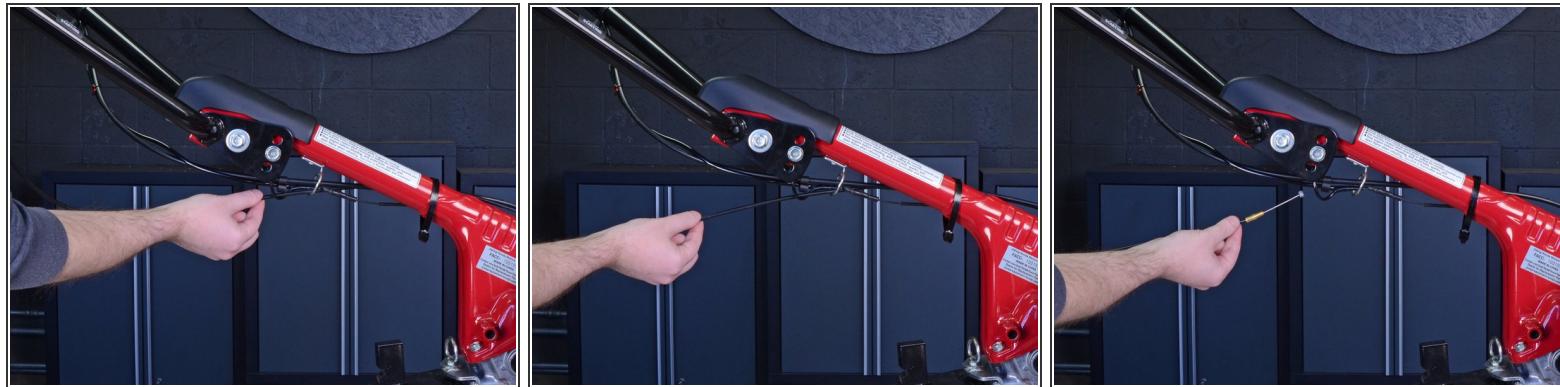

- Grab the end of the throttle cable with your fingers and push the cable inwards so that it lines up with the small cutout on the control lever.
- Lift the throttle cable straight up to free it from the control lever.

## Step 22

- Grab onto the end of the throttle cable housing and pull it out of its holder on the control lever.
- Lift the throttle cable straight up to completely remove it from the control lever.

## Step 23

- Pull the throttle cable all the way out, fishing it through the clips, cable ties, and guides.

To reassemble your device, follow these instructions in reverse order.
