

# How to Fix Melted or Lumpy EOS Lip Balm

This guide will show you how to fix a melted or broken EOS lip-balm back to its original state.

Written By: Kate Hubbell

## INTRODUCTION

This is a very simple process for repairing a melted or broken EOS lip balm that will require no more than five minutes of work, with another 10 minutes of allowing the finished product to cool.

---

### TOOLS:

- [Microwave safe bowl](#) (1)
  - [Microwave](#) (1)
  - [Sharp knife](#) (1)
  - [freezer](#) (1)
-

## Step 1 — How to Fix Melted or Lumpy EOS Lip Balm

- To begin, open the lip-balm and use the knife to separate the center piece which holds the lip-balm in place from the bottom portion of the container.

 Knives are sharp, and you need to apply some force to split the container from the grate. It is easier to wedge the knife by the little, square notch that would usually lock the EOS.

## Step 2

- Once they've been separated, remove the lip-balm from the center grate and place all pieces into the small microwavable bowl.

## Step 3

- Stirring every 10-15 seconds, microwave the bowl of balm until it reaches a liquid state.

 Be sure to stir every 10-15 seconds. Balm that is left too long in the microwave will become dry and burned.

## Step 4

- Immediately after removing the balm from the microwave, snap the middle grate into place on the top of the container this time

## Step 5

- Pour the melted lip-balm through the grate and into the lid of the container in order to allow the balm to take shape of the container and to settle into the grate.

## Step 6

- Place the open container in the fridge or freezer for approximately 10 minutes, or until the balm is hardened.

## Step 7

- Once settled, remove from freezer and snap the bottom of the container firmly to put the pieces back together.

## Step 8

- Twist open the container as usual; your lip-balm should be good as new!

That's it! Enjoy your nice, smooth EOS.
