INTRODUCTION

Replacing the windshield wiper blade is a simple repair.

PARTS:

- Honda Spike Windshield Wiper Blade (1)

Step 1 — Lift the Wiper Arm

- Grab the windshield wiper at the base and lift in a counter-clockwise motion around the hinge, lifting the blade from the window.

Step 2 — Rotate the Blade Assembly

- Rotate the wiper blade assembly so the replaceable blade faces outward.

Step 3 — Remove the Retaining Clasp

- Remove the retaining clasp on the right edge of the blade.
- ⓘ The clasp is always on the rightmost edge of each blade.

Step 4 — Removing the Wiper Blade

- After removing the clasp, pull the blade from the wiper arm.

Step 5 — Insert the Wiper Blade

- Insert the new blade by sliding it back into the slots on the wiper arm.

Step 6 — Reattach the Retaining Clip

- Reattach the clasp by sliding it back over the edge of the wiper blade.

Step 7 — Rotate the Wiper Blade

- Return the windshield wiper blade back to its original orientation.

Step 8 — Lower the Wiper Arm

- Rotate the wiper arm clockwise around the hinge until it rests on the windshield.
