

How to Upgrade to El Capitan

This guide will demonstrate how to upgrade your mac to Apple's new operating system OS X El Capitan (10.11)

Written By: Jake

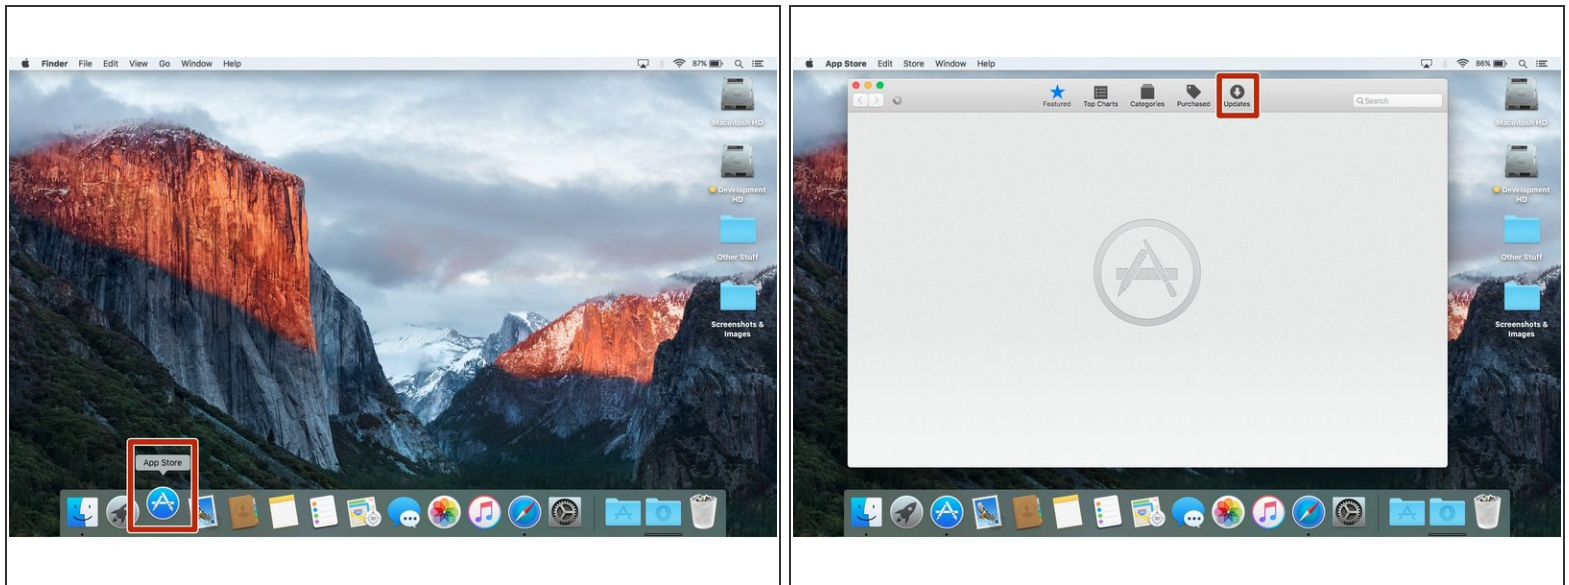

Step 1 — Check Your Current OS X Version

- Before installing OS X 10.11, you need to make sure that you have at least OS X version 10.6.8 installed. Check this by clicking on the 'Apple' menu, and About This Mac.
- Your Mac should show at least OS X Snow Leopard 10.6.8
- ❗ If you don't have at least version 10.6.0, you'll need to purchase an OS X Snow Leopard DVD from Apple.

Step 2 — Check for System Updates in the App Store

- To start, launch the App Store by clicking its icon in the dock, or searching it in spotlight. When the App Store opens, click on the 'Updates' on the top of the store.
- Once you're in the updates tab, you will see a large banner towards the top of the page advertising El Capitan.

To reassemble your device, follow these instructions in reverse order.
