

How to add a Smart Core to your phone.

This guide will show you how to put the Smart Core into the Smart Case with the Smart Belt.

Written By: Levi G

INTRODUCTION

In this guide, you need a Case, Core, Belt, and Smart Device.

Step 1 — Case and Belt

- First, insert the small blue cable in the box into the Core.
- The end with the MicroUSB goes into the Core.

Step 2 — Insertion into Smart Case

- Put the cable into its proper slot, in the bulge on the bottom of the case.
- The Core is already connected, and goes with the cable fitting into the circular slot. (see second image)

Step 3 — Phone Connection

- Slide the bottom end of the phone 3/4 of the way in, from the top towards the bottom.
- Continue sliding slowly. Make SURE the lightning connector on the cable connects to the phone.
- The cable connector can sometimes slide under the phone. Avoid this.

Step 4 — Final Build

- Once the phone's bottom is flush with the case bottom, double check that the circle on the Core is lined up with the core on the case.
- Now starting with the top corner without a camera, push it into the case.
- Repeat step 2 with the top corner with a camera.

Step 5 — Enjoy

- Enjoy your great new case!

Features:

- Smart Battery
- Military Grade Protection
- Wireless Charging
- Extra Storage*
- * - Optional/Varies by model
- External Drive*
- Powerful LED Light Array

Enjoy!
