

How to clean lens

Shows how to disassemble camera so that lens can be cleaned.

Written By: Stan

TOOLS:

- [Essential Electronics Toolkit \(1\)](#)

Step 1 — Remove battery.

- Insert wisdom here.

Step 2 — Remove cover on end of camera.

- Remove black screw on bottom corner near bottom left of picture viewing screen. Gently pry off end of camera, exposing 2 black screws. Remove both screws.
- *i* If present, remove hand strap.

Step 3

- On hand strap anchor end, remove two black screws.

Step 4

- There are two black screws on the bottom of the camera right by the tripod mount. Remove the screw nearest to the back of the camera.

Step 5

- Open HDMI cover and remove single black screw.

Step 6

- Gently pry off back of camera.

Step 7

- Remove dial and centre button.

Step 8

- Remove small circuit board.

Step 9

- Remove black screw in upper corner, and black screw from top.
- Remove metal cover.

Step 10

- Remove three silver screws.
- Gently lift copper tab to expose lens and CCD.
- Swab lens with 99% isopropyl rubbing alcohol (99% leaves very little residue when dry.)

To reassemble your device, follow these instructions in reverse order.
